Feature Description:	The war department acquired this land to expand the Minneapolis-Honeywell Regulator Company facilities which were producing fire control equipment for the war effort. The site consisted of manufactur ing buildings which were built in the early 1900's. Records show that an additional 10-barrel underground storage tank was installed by Standard Oil company in 1942. This tank was not located during the field survey. Buildings formerly located on this property have been removed.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D005
Waste Description: Barium

Waste Code: D006
Waste Description: Cadmium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D011
Waste Description: Silver

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

NICO PRODUCTS INC (Continued) **1000326681**

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

NICO PRODUCTS INC (Continued) **1000326681**

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/19/2023
Date Data Arrived at EDR: 10/03/2023
Date Made Active in Reports: 10/19/2023
Number of Days to Update: 16

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023
Date Data Arrived at EDR: 10/03/2023
Date Made Active in Reports: 10/19/2023

Next Scheduled EDR Contact: 01/08/2024
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/19/2023
Date Data Arrived at EDR: 10/03/2023
Date Made Active in Reports: 10/19/2023

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/25/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

LCP: Closed Landfills Priority List

The Minnesota Legislature enacted a law to manage and clean up the state's closed Mixed Municipal Solid Waste Landfills. Under that law, the MPCA is required to create and periodically revise a priority list of qualified landfills, based on the relative health and environmental risks they present. The MPCA established the first such priority list in December, 1994.

Lists of state and tribal brownfield sites

BROWNFIELDS: Petroleum Brownfields Program Sites
Purchasing, selling, or developing property can present a special set of obstacles if the property is contaminated with chemicals. The Petroleum Brownfields Program is one of several programs within the Minnesota Pollution Control Agency (MPCA) designed to help people address these obstacles. The purpose of the Petroleum Brownfields Program is to provide the technical assistance and liability assurance needed to expedite and facilitate the development, transfer, investigation and/or cleanup of property that is contaminated with petroleum.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

CDL: Clandestine Drug Labs

This data was passively gathered. That is, the DOH asks law enforcement and other agencies to notify them of Clandestine Drug Labs (CDLs). They do not require reporting of events. Therefore the data represents only a subset of all CDLs. This data has not been verified. The DOH has made no attempt to verify that reported CDLs actually occurred. They have no knowledge if the CDL was involved in cooking or just consisted of chemicals associated with Meth production. The reports they receive are that a suspected CDL was seized.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

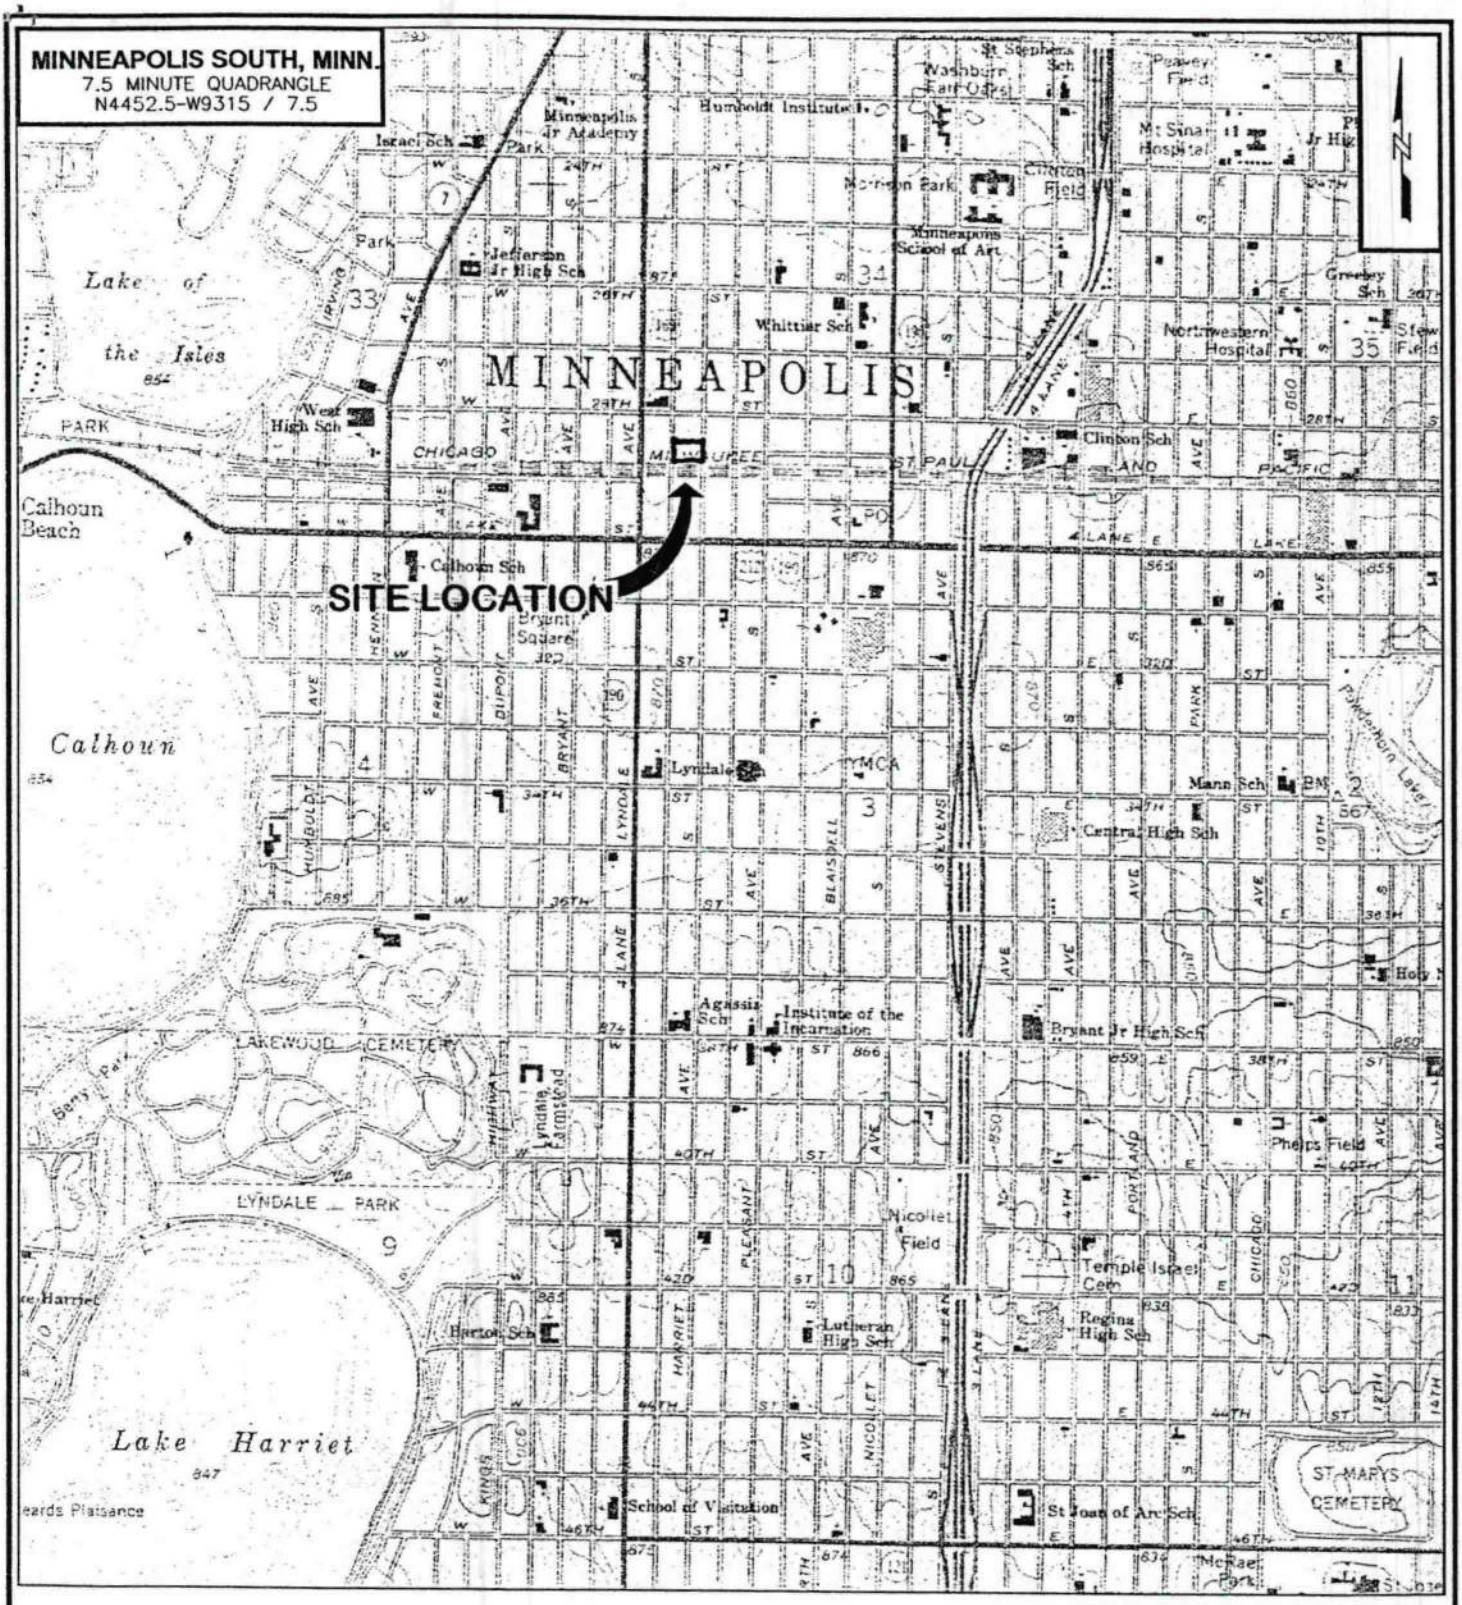
1 Introduction

This Limited Phase II Environmental Site Assessment Report (Phase II Report) documents the Limited Phase II Environmental Site Assessment (Phase II) conducted for the property located at 2845 Garfield Avenue South, in Minneapolis, Minnesota (Property). Figure 1-1 shows the location of the Property. The Phase II was conducted for Hennepin County Taxpayer Services Department.



1.1 Property History

Initial development of the Property occurred in approximately 1888. The Property was developed as a grain elevator operation. In approximately 1912, Archer Daniels Midland (ADM) acquired the Property and grain elevator operation. ADM expanded the grain elevator operation until by 1950 most of the Property was occupied by grain storage structures and elevators.

ADM donated the Property to Friends Ministry, Inc. in 1980 for a tax deduction. In September 1985, the Property and elevator structures became Tax Forfeited Land (TFL), and ownership was passed to the State of Minnesota, in trust for the local taxing districts, and under administration of the Hennepin County auditor. In August 1988, under a court order, the city of Minneapolis removed all the structures from the Property, including all grain elevators and buildings.

The Property was used informally by local gardeners begining in 1991. In the Spring of 1994, the Sustainable Resources Center entered into a five year lease (through March 31, 1999) with Hennepin County to use the Property as a community garden. SRC established the Soo Line Community Garden. As part of property improvements, SLCG installed a water supply system on the Property. A Phase I Environmental Site Assessment (ESA) was conducted by Mr. Timothy G. Casey in April 1997(Casey ESA) prior to constructing the water supply system on the Property. The Casey ESA was conducted for the Sustainable Resources Center and the Soo Line Community Gardens and concluded that there was no "evidence of recognized environmental conditions" on the Property.

A review of the Casey ESA by ThermoRetec indicated that some potential areas of concern were not addressed, and additional review would be prudent. In the document titled *Phase I Environmental Site Assesment, 2845 Garfield Avenue South Minneapolis, Minnesota PIN 34-029-0005, March 1999,* ThermoRetec recommended that soil samples be taken at strategic locations on the Property.

ThermoRetec
Smart Solutions. Positive Outcomes.

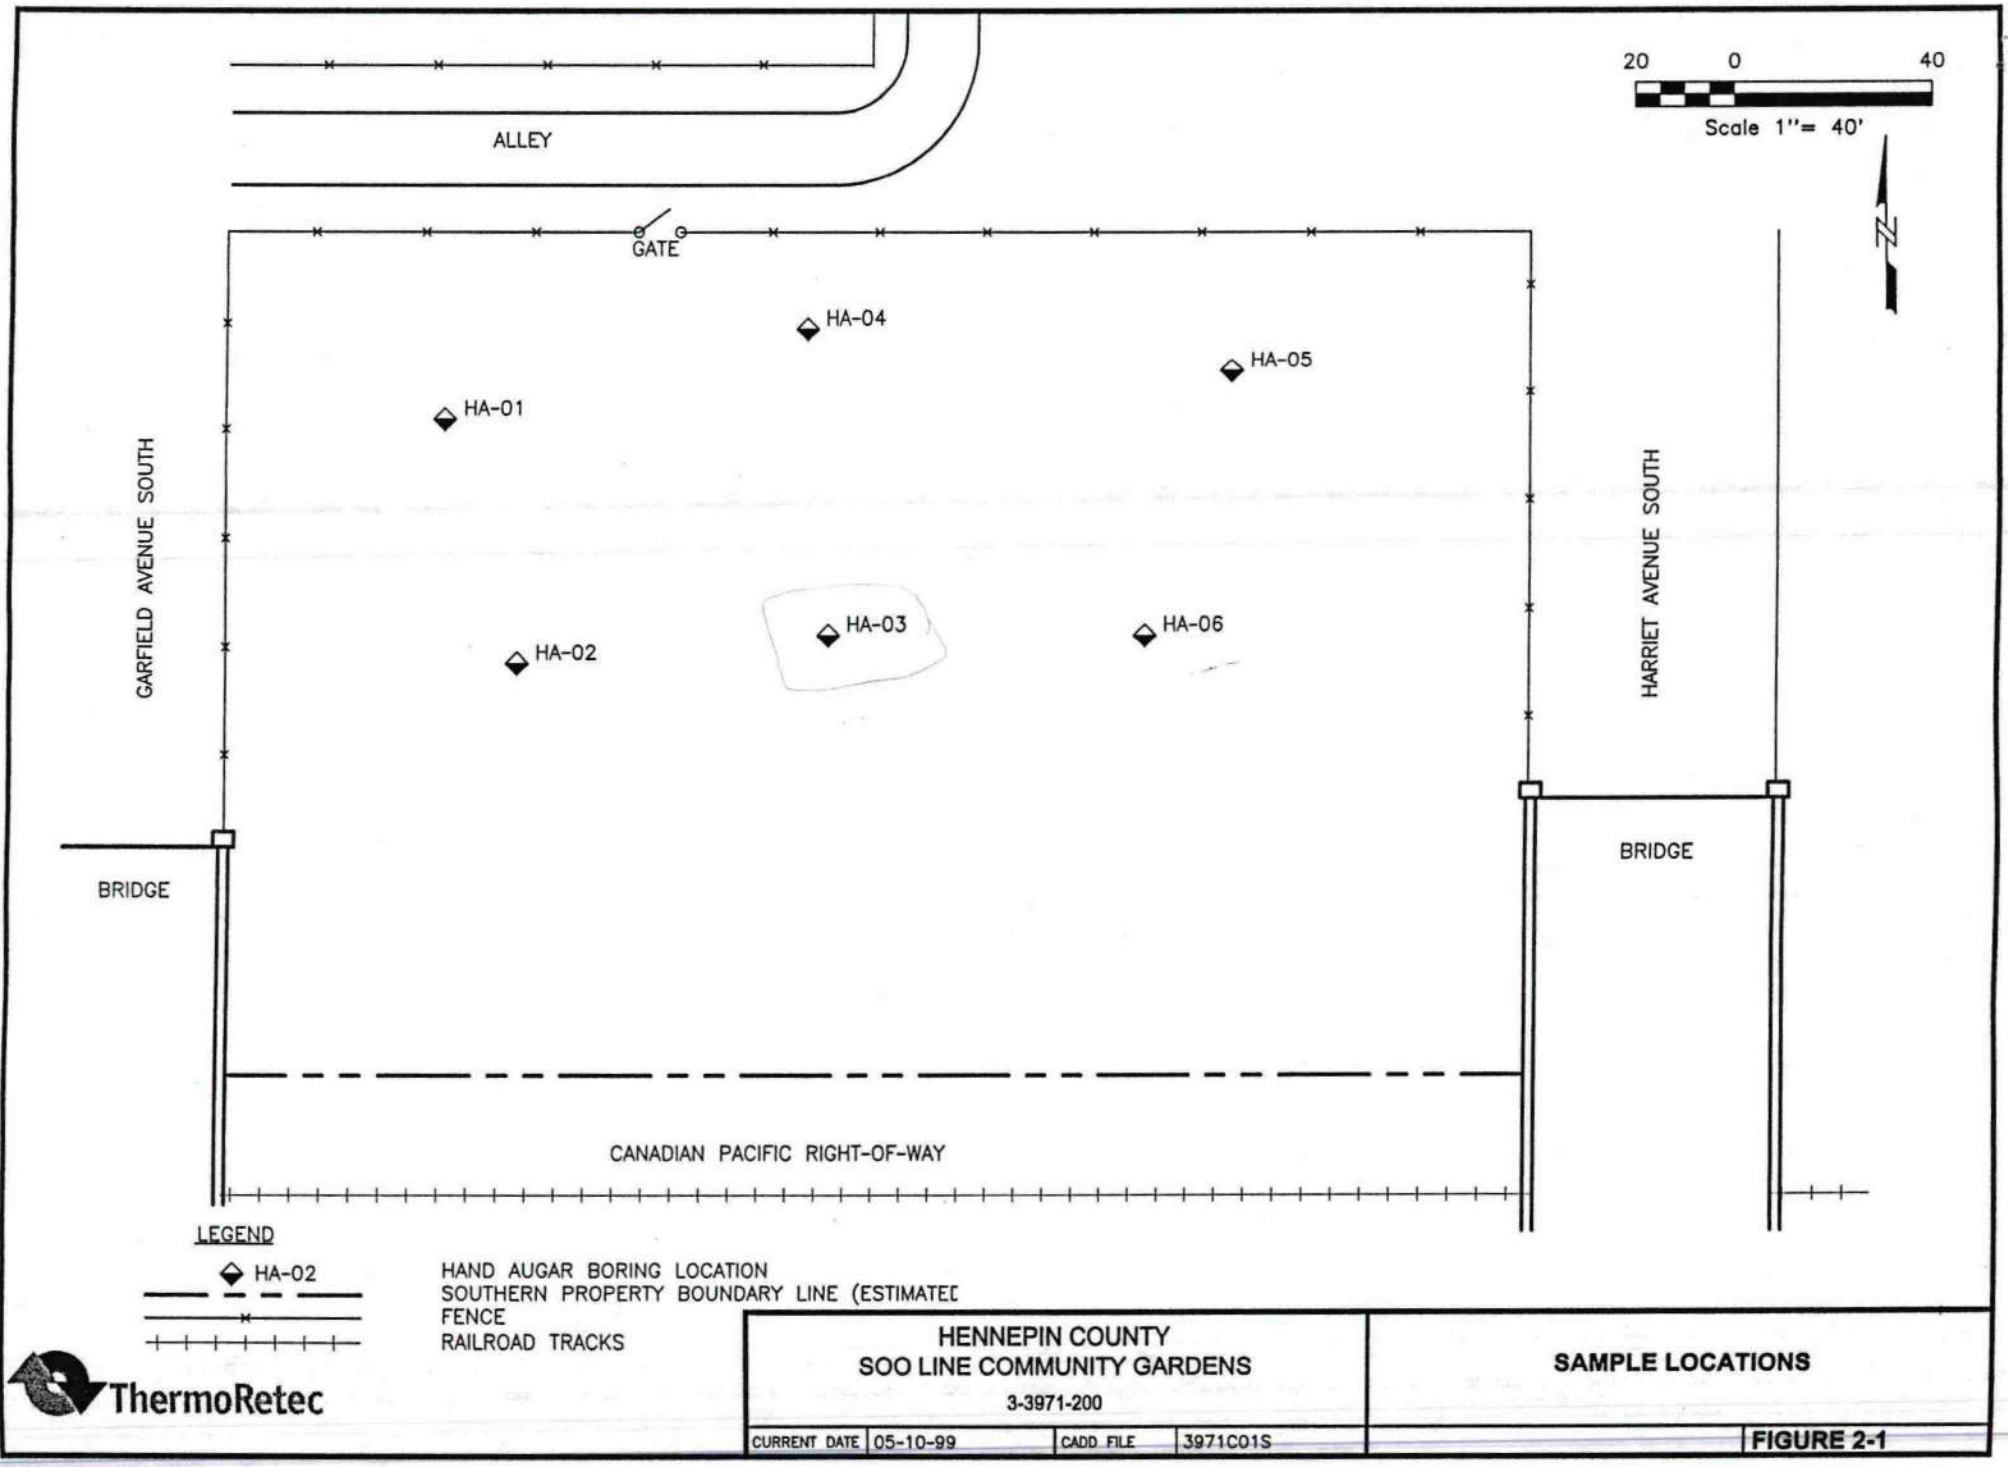
HENNEPIN COUNTY SOO LINE COMMUNITY GARDENS 3-3971-100			**SITE LOCATION MAP** **MINNEAPOLIS, MINNESOTA**
CURRENT DATE	01-22-99	CADD FILE 3971S01S	**FIGURE 1-1**

1.2 Purpose

The purpose of the Phase II was to determine whether the Property has any contamination resulting from prior industrial uses, and whether the contamination poses a risk to human health and environment under current land use.

2 Field Activities

During April 1999 eight soil samples were obtained from the property using hand augers. An attempt was made to identify portions of the Property where historic industrial operations may have resulted in residual contamination; however, a review of aerial photographs and interviews with individuals familiar with the Property (detailed in the Phase I Report) did not reveal any specific areas of potential concern. Alternately, sample locations were chosen to coincide with areas of the Property currently being activity used for gardening. Figure 2-1 shows the location of the six hand-augers sample points. Soil samples were collected from a depth of approximately 2 feet at locations HA-1, HA-2, HA-5 and HA-6. Soil samples from location HA-3 were collected at depths of 6 inches and 3.5 feet. Soil samples from location HA-4 were collected at depths of 6 inches and 3.0 feet. Due to the increasing number of rocks the two deep samples could not be obtained at the originally desired depth of 5 feet.



All samples were submitted to an analytical laboratory for the analysis listed here:

Interpoll Testing Laboratory

- Diesel Range Organics
- Volatile Organic Compounds, MDH Method 465E

Minnesota Valley Testing Laboratory

SAMPLE LOCATIONS

FIGURE 2-1

3 Results

3.1 General Observations

Soil removed during the collection of subsurface samples was inspected throughout the entire length of the bore hole. The field scientist inspected the soil for unusual odor, color, staining, or debris. Nothing unusual was observed in any of the borings.

3.2 Diesel Range Organics

The diesel range organics were detected in every sample with levels ranging from 9.8 mg/Kg to 1400 mg/Kg as seen in Table 3-1. The more elevated concentrations were in samples collected at least 2 feet below ground surface, and generally below the level accessed by gardeners. Laboratory analytical reports for DRO are included in Appendix A.

There is not a specific risk associated with DRO in soil, as it represents a mixture of petroleum hydrocarbons typically associated with diesel fuel. Concentrations in excess of 1,000 mg/Kg present a concern if wide spread and in accessible soil, which is not the case at the Property.

3.3 Volatile Organic Compounds

A small number of the volatile organic compounds (VOCs) were found in one or more samples. The types of VOCs detected represent petroleum type contamination and compounds resulting from the natural degradation of petroleum products. All values were well below the Minnesota Department of Health Residential Soil Reference Value (SRV). The SRV's provide a measure of acceptable direct exposure and ingestion of contaminated soil. SRV values are included as the first column in Table 3-1. There were no detections in samples HA-4 (0.5 feet below ground surface) or HA-6 (2 feet). Table 3-1 shows the VOC data for all samples. Additionally, there is little or no human health risk due to uptake of the type of VOC's found on the Property into plants and subsequent

* - This number is for the Total xylenes

Appld. value is 2.9

ingestion (ATSDR, 1991[1]; Hattemer-Fry, H.A, Travis, C.C., and M. L. Land, 1990[2]).

The Residential SRV values represent the most conservative values of risk. Concentrations below the SRV are not generally considered to pose an unacceptable risk to human health.

Laboratory analytical reports for VOCs are included in Appendix A.

3.4 Pesticides

No List I Pesticides were detected in any of the samples. Laboratory analytical reports for pesticides are included in Appendix A.

---

4 Recommendations

The results of the soil testing detailed in Section 3 indicate that historic industrial operations at the Soo Line Community Gardens property did not cause environmental contamination which would pose a risk under the current land use. Although some industrial contamination was detected in soil, the concentrations of the detected compounds are below the established SRVs, and do not pose an unacceptable risk. Additionally, many of the detected compounds were in samples collected at depths greater than 2 feet deep, below the zone normally accessed by gardeners.

This study was limited to shallow soil. No soil greater than 3.5 feet below ground surface was tested, and groundwater beneath the Property was not tested. However, based upon current last use, ThermoRetec does not recommend any additional investigation at this time.

Soils Data Review Letter

Dear Mr. O'Connor and Mr. Connoy:

The Minnesota Pollution Control Agency (MPCA) staff in the Voluntary Investigation and Cleanup (VIC) Unit has reviewed recently collected soil analytical results (Soils Data) pertaining to the Soo Line Gardens property located at 2845 Garfield Avenue South (the Property). The Property historically was used for the operation of grain elevators from the 1880's until the 1980's. Structures associated with the elevators were demolished and removed from the Property during the late 1980's. Since 1994, the Property has been leased by the Sustainable Resources Center, which in turn, made plots available to the community for private gardening.

The Soils Data summarizes the results of six composite samples conducted for the analysis of semivolatile organic compounds (SVOCs), metals, and Diesel Range Organics (DRO); and nine grab samples analyzed for volatile organic compounds (VOCs). Additionally, one of the grab samples also was analyzed for metals, SVOCs and DRO.

The results indicated the presence of DRO at concentrations ranging from 15 to 140 parts per million (ppm), and carcinogenic polynuclear aromatic hydrocarbons at concentrations ranging from non-detect to 16.2 ppm, expressed as total benzo[a]pyrene equivalents (BaP Equivalents). BaP Equivalents are a means to estimate human health risk for several common carcinogenic PAH compounds in the form of their equivalents to benzo[a]pyrene, one of the more widely researched of the PAH compounds. DRO

represents a wide range of hydrocarbon compounds in the range typical of diesel fuel. The origin of the DRO is best determined by compound specific analyses such as that performed by analyzing for SVOCs.

The MPCA project staff, along with the assistance of the MPCA human health toxicologist has recently reviewed the Soils Data to evaluate the potential risks posed to gardeners from the direct human health exposures of a) incidental ingestion of soil; b) inhalation of particulates; and c) dermal contact. These three pathways are evaluated by comparison of the soil concentrations with the residential soil reference values (SRVs) which consider the combined risk of these three human health pathways. Soil concentrations that are at or below the residential SRVs are generally considered acceptable for unrestricted land use such as residential properties. Note that the residential SRV for BaP Equivalents is 2 ppm.

A screening evaluation, utilizing benzo[a]pyrene as a surrogate for the carcinogenic PAHs, was also conducted to evaluate potential risks posed by the ingestion of produce from the garden plots via the soil-to-plant uptake pathway. This was evaluated by comparing the results with an USEPA plant uptake model using numerous default assumptions including a) the produce from the Property represents only a fraction of the total produce consumed; b) the total produce consumption rate of the gardeners is typical of the national average for consumers of homegrown produce; and c) plant uptake of potential contaminants is due principally from soil-to-root uptake and not from vapor uptake or from particulates adhering onto leaves. Specific uptake values for benzo[a]pyrene in the USEPA model are estimated based on the physical properties of benzo[a]pyrene rather than consisting of actual uptake measurements. As a result this exposure pathway has a greater degree of uncertainty compared to the direct contact human health pathways (i.e. incidental ingestion, dermal contact and inhalation).

Based on an evaluation of the Soils Data, the following conclusions and recommendations are made:

1. It is unlikely that the gardeners have been exposed to any significant human health risk from the three direct exposure pathways – a) incidental ingestion of soil; b) inhalation of particulates; and c) dermal contact. This conclusion is based on the fact that the sample results from the 0-12" soil interval is less than the residential SRV for BaP Equivalents of 2 ppm.

2. The gardening activities at the Property may continue based on a preliminary evaluation of the risks associated with the plant-uptake exposure pathway. This conclusion makes the assumption that the fraction of the produce consumption from the gardens at the Property averages approximately 10% or less of an individual's total produce consumption. A greater or lesser potential risk would be estimated

based on whether the fraction of total produce consumed from the garden plots is more or less than this estimate of 10%.

3. Additional soil sampling consisting of composites collected over a smaller area or additional discrete grab samples is recommended in order to confirm the trend of PAH contamination indicated in the Soil Data, to identify any localized area of impact that can be addressed, and to provide additional support for the conclusions provided in item #1 and #2.

4. The evaluation of the potential risks associated with plant uptake has a greater degree of uncertainty compared to the evaluation of the human health risks based on direct contact largely due to the fact that less research is available on this exposure pathway. The placement of several inches of clean fill over the existing soil at either individual plots or over a wider area of the Property exists as an option to potentially reduce or minimize the uncertainty regarding the risks associated with this exposure pathway. Any soil brought onto the Property for this purpose should come from a verified clean source. The MPCA also recommends that gardeners at the Property be mindful of washing their produce prior to consumption and limiting hand-to-mouth activity which may result in inadvertent ingestion of soil.

These preliminary conclusions are based solely on the results in the Soils Data and the assumptions noted in this letter. Standard VIC Program disclaimers are provided in Attachment A. If you have any questions regarding this letter please contact me at (651) 297-5573 or Gerald Stahnke at (651) 297-1459.

1. Reservation of Authorities

The MPCA Commissioner reserves the authority to take any appropriate actions with respect to any release, threatened release, or other conditions at the Site. The MPCA Commissioner also reserves the authority to take such actions if the voluntary party does not proceed in the manner described in this letter or if actions taken or omitted by the voluntary party with respect to the Site contribute to any release or threatened release, or create an imminent and substantial danger to public health and welfare.

2. No MPCA Assumption of Liability

The MPCA, its Commissioner and staff do not assume any liability for any release, threatened release or other conditions at the Site or for any actions taken or omitted by the voluntary party with regard to the release, threatened release, or other conditions at the Site, whether the actions taken or omitted are in accordance with this letter or otherwise.

3. Letter Based on Current Information

All statements, conclusions and representations in this letter are based upon information known to the MPCA Commissioner and staff at the time this letter was issued. The MPCA Commissioner and staff reserve the authority to modify or rescind any such statement, conclusion or representation and to take any appropriate action under his authority if the MPCA Commissioner or staff acquires information after issuance of this letter that provides a basis for such modification or action.

4. Disclaimer Regarding Use or Development of the Property

The MPCA, its Commissioner and staff do not warrant that the Site is suitable or appropriate for any particular use.

5. Disclaimer Regarding Investigative or Response Action at the Property

Nothing in this letter is intended to authorize any response action under Minn. Stat. § 115B.17, subd. 12.

RE: Site Investigation Results Summary
Soo Line Community Gardens Site
Minneapolis, Minnesota

Dear Mr. Connoy:

This letter presents the results of the environmental investigation completed at the Soo Line Community Gardens property under the U.S. Environmental Protection Agency (EPA) Brownfields Assessment Demonstration Pilot program. A summary of the recent meeting and related correspondence with the Minnesota Pollution Control Agency (MPCA) is also provided. Per your request, copies of this letter are being provided to your partner on this project, Hennepin County.

Background Information

The subject property is Minnesota State tax-forfeited land managed by Hennepin County. The County leases the property to the Sustainable Resources Center for use as the Soo Line Community Garden. In 1999, the Minneapolis Community Development Agency (MCDA) obtained a grant from the U.S. EPA to help complete environmental assessments on a number of tax-forfeited properties managed by the County. The Soo Line Community Garden was one of six properties targeted for assessment as part of the grant.

Prior to the recently completed investigation work, numerous environmental studies were previously completed at the property. The previous studies included:

- A Phase I Property Transfer Assessment was completed by Bay West, Inc. dated May 1, 1992. In summary, this assessment concluded that the historical activity on the property did not represent an environmental concern.

- A Phase I Environmental Site Assessment of the property was completed by Mr. Timothy G. Casey dated April 1997. The assessment was completed for the Sustainable Resources Center and the Soo Line Community Gardens prior to the installation of a city water supply system on the property. In summary, this assessment identified no significant environmental concerns associated with the property.

- A Phase I Environmental Site Assessment and Soil Investigation were completed for Hennepin County in 1999 by ThermoRetec Consulting Corporation (ThermoRetec). The Phase I assessment results indicated that the property was historically used as a grain storage facility. Based on the assessment results, ThermoRetec completed a soil investigation that consisted of collecting eight soil samples for laboratory testing. In summary, the laboratory testing results detected very low concentrations of primarily petroleum-related compounds. Based on the investigation results, ThermoRetec concluded that the property was suitable for continued use as a community garden.

Current Investigation

The current investigation was completed by Peer Environmental & Engineering Resources, Inc. (PEER) in a manner consistent with the documents entitled *Work Plan for Soo Line Community Gardens,* dated November 4, 2000, and the Site Investigation Status letter to Mr. Alan Baumann of the U.S. EPA dated February 6, 2001.

The site investigation included the following general elements:

- Completion of test borings B-1 through B-8 to depths of 4 feet (see Figure 1).
- Field screening of soil samples collected from the borings for potential contamination using a photoionization detector (PID).
- Collection of soil samples at selected depths for laboratory analysis (0 to 12 inch and 3 to 4 foot depth intervals).

Soil samples collected during the investigation were analyzed at a laboratory for a broad range of potential contaminants. Contaminant types were selected based on the historical property uses documented in the previous environmental studies (grain storage facility), and discussions with Minnesota Pollution Control Agency (MPCA) and Minnesota Department of Agriculture (MDA) staff. The laboratory testing included the following categories of analysis:

- Selected metals (aluminum, magnesium, lead, arsenic, cadmium, mercury).
- Volatile organic compounds (VOCs, including selected additional fumigants).
- Semi-volatile organic compounds (SVOCs).
- Diesel range organics (DRO).
- Total Cyanide
- Selected pesticides (malathion, methoxychlor, cyfluthrin)

A summary of the analytical testing results is provided in Table 1. Where available, residential Soil Reference Values (SRVs) established by the MPCA are provided in the table. The residential SRVs are provided for comparison purposes to help determine if the contaminant concentrations are consistent with a residential-type use of the property.

The following observations regarding the soil analytical results are provided:

- Relatively low concentrations of various metals were detected in the soil samples. The concentrations detected were below the residential SRVs (for metals with an established SRV), and within normal anticipated values for metals in natural soil (background levels).

- Naphthalene was the only VOC detected in the soil samples. The highest naphthalene concentration detected at the site (1.0 milligrams per kilogram [mg/kg]) is well below the residential SRV of 10 mg/kg.

- Total cyanide was not detected above the laboratory detection limit in any of the samples analyzed.

- A low concentration of the pesticide Methoxychlor was detected at the 3 to 4 foot depth interval at boring B-4 [sample identifier B-4B (3-4')], and at the 3 to 4 foot interval within the Main Garden Area [composite sample collected from borings B-5, B-6, B-7 and B-8, sample identifier MGC-B (3-4')]. The Methoxychlor concentrations detected in these samples (0.15 mg/kg and 0.03 mg/kg, respectively) are significantly below the residential SRV of 11 mg/kg. The other two pesticides, Cyfluthrin and Malathion, were not detected above laboratory detection limits in any of the samples analyzed.

- DRO was detected at concentrations ranging from 15 mg/kg to 140 mg/kg in 5 of 6 soil samples analyzed for this parameter. DRO is a general screening analysis for petroleum-related compounds in the range of diesel fuel. The MPCA has not established an SRV for DRO.

- SVOCs classified as polycyclic aromatic hydrocarbons (PAHs) were detected above the laboratory detection limits in all seven soil samples analyzed for these compounds. The MPCA has established a SRV for a group of six selected PAHs referred to as the benzo(a)pyrene equivalent (referred to as BaP equivalent). In summary, BaP equivalent values were calculated at or above the residential SRV at the 0 to 12 inch and 3 to 4 foot depths at location B-4 [sample identifiers B-4A (0-12") and B-4B (3-4')], in the composite sample collected at the 3 to 4 foot depth in the Main Garden Area [composite sample collected from borings B-5, B-6, B-7 and B-8, sample identifier MGC-B (3-4')], and in the composite sample collected at the 3 to 4 foot depth of the Perimeter Sloped Area [composite sample collected from borings B-1, B-2 and B-3, sample identifier PSC-B (3-4')]. In general, SVOCs were detected at higher concentrations in the samples collected from the 3 to 4 foot depth interval, compared to samples collected from the 0 to 12 inch interval. The average BaP concentration for soil samples representing the 0 to 12 inch depth interval at the site is less than the residential SRV of 2 mg/kg.

- All other individual PAH compounds were detected in the samples at concentrations below the residential SRVs.

Summary and Discussion

In summary, elevated concentrations of SVOCs (primarily PAHs) were detected in the soil samples collected at the site. BaP values in some of the samples (a calculated value based on the concentrations of six selected PAHs) exceeded the SRV established by the MPCA for a residential land use setting.

PAHs consist of a group of over 100 different chemicals that are formed by the incomplete combustion of various organic substances such as coal (electric power plants), oil and gas (exhaust from cars and trucks), and many other common materials including tobacco and charbroiled meat. PAHs are found in coal tar, crude oil, creosote, soot, ash, and roofing tar, as well as in some manufactured medicines, dyes, plastics and pesticides. In addition to manufactured uses, PAHs can enter the environment naturally through releases to air from volcanoes and forest fires. Some PAHs are considered to be carcinogens.

The source of the PAHs detected at the property is not known. Possible sources include the previous grain storage operations at the property, or the previous placement of potentially impacted fill soil either before the grain storage facility was constructed or after it was demolished. For example, a small quantity of crushed asphalt intermixed with soil can be a source of elevated PAHs in fill.

MPCA Meeting and Correspondence

A meeting was held at the MPCA on May 1, 2001 to discuss the investigation results and any potential health risks related to the past or continued use of the property for gardening. After the meeting, the MPCA prepared a letter dated May 3, 2001 summarizing their review of the investigation data and an evaluation of potential health risks as they relate to gardening at the site. A copy of the MPCA letter is attached.

Based on their review of the investigation data, the MPCA concluded in the letter that it was unlikely that the gardeners have been exposed to any significant human health risk from direct exposure pathways (i.e., incidental ingestion of soil, inhalation of soil particles, and dermal contact). In addition, the MPCA indicated that gardening could continue at the site based on a preliminary evaluation of the plant-uptake exposure pathway.

The MPCA recommended collecting additional soil samples at the site for PAH analysis to provide further confirmation of their conclusions. Based on discussions with the MPCA during the meeting, the focus of the additional sampling and PAH analysis would consist of near surface soils within actual gardening plots.

Closing

As discussed during the MPCA meeting, the MCDA is proposing to conduct the additional investigation recommended by the MPCA within the U.S. EPA Brownfields Assessment Demonstration Pilot program. This will require approval of the proposed investigation elements by the U.S. EPA, and completion of the work in a manner consistent with the previously approved Quality Assurance Project Plan (QAPP) for the project.

Over the next few days, PEER will develop an approach to the additional investigation sampling with input by the MCDA, Hennepin County and the MPCA. We will then prepare the necessary correspondence to obtain the required approvals from the U.S. EPA.

The additional investigation will be implemented upon receipt of U.S. EPA approval. A formal documentation report for the site investigation will be prepared after the additional investigation results are obtained.

If you have any questions, please do not hesitate to contact me at (952) 831-3341 at your earliest convenience.

Sincerely,

Peer Environmental & Engineering Resources, Inc.

Kenneth A. Larsen, P.E.
Vice President

Notes:

All values reported are in mg/kg - milligrams per kilogram, which is equivalent to parts per million.

SRV = January 1999 Minnesota Pollution Control Agency working draft Tier 1 Soil Reference Value for residential settings.

ND ( ) = Parameter not detected above the laboratory reporting limit in parentheses.

* = Indicates carcinogenic polynuclear aromatic hydrocarbons (PAHs). These compounds are also used to calculate the total benzo(a)pyrene (BaP) equivalent.

Shaded cell indicates a value that has exceeded the residential SRV.

NE = Not established.

** Duplicate sample collected of MGC-A (0-12")

*** Duplicate sample collected of B-3B (3-4')

-- = Sample was not analyzed for the indicated compounds/parameters.

SUBJECT: Investigation Closure of CF-4978, Soo Line Gardens

This memo serves as Investigation Closure for CF-4978. No pesticides were detected in the sampling conducted. PCA issues may exist and will be addressed by that agency. Because no pesticides were detected, MDA cannot issue a No Action Letter, due to fact sampling was not adequate for such a determination. Based on information provided in the Phase I and Phase II completed by PEER Environmental & Engineering Resources, Inc., and other Site Documents, MDA does not have reason to believe other issues regarding agricultural chemical contamination exist at this Site

EXECUTIVE SUMMARY

BlackRock Realty retained GaiaTech Incorporated (GaiaTech) to conduct a Limited Phase II Site Investigation of the Lyndale Apartments property located at 2829 and 2833 Lyndale Avenue South in Minneapolis, Hennepin County, Minnesota (the site). The investigation was conducted to evaluate potential impacts identified in the Phase I Environmental Site Assessment (ESA) performed by GaiaTech in October 2007.

The 2833 Lyndale Avenue South property is a 1.02-acre parcel of land, while the 2829 Lyndale Avenue South property is a 0.13-acre parcel of land. Both parcels are currently being redeveloped with a multi-family, 6-story apartment complex with a sub-grade parking structure. At the time of GaiaTech's site reconnaissance, the western half of the site was being excavated to a depth of approximately 11 feet below ground surface (bgs) in preparation for construction of the sub-grade parking structure.

The Phase I ESA identified the following areas of environmental concern in connection with the site which triggered this investigation:

- **Historical Site Operations**: The site has been developed and utilized since the late 1800s for various commercial operations including a lumber company, a coal company, insulation manufacturing, chimney cleaning, and boiler repair. Since 1950, vehicle maintenance was reportedly conducted at the site. Although no specific significant releases or impacts were identified in the historical information reviewed, these past operations represent a potential impact risk to the site.

- **Former Oil/Water Separator**: An oil/water separator was located in the former westerly-located warehouse structure at the site. During a previous Phase II investigation conducted at the site, elevated levels of diesel range organics (DRO) (18 milligrams per kilogram) were identified in a hand auger sample taken in the vicinity of the oil/water separator. The former oil/water separator represents a potential conduit for contaminants to have entered the soil in this area and is considered a potential impact concern to the site.

- **Former Aboveground Storage Tank (AST)**: The site was identified in the database report as having a 350-gallon used oil AST that was located adjacent to the south of the easterly-located storage building. Although still listed "active" by the Minnesota Pollution Control Agency (MPCA), site representatives stated that the tank was removed circa 2006. GaiaTech did not observe any evidence of ASTs during the site reconnaissance. The AST reportedly lacked an overfill/spill containment system or a concrete pad beneath the tank. The site was not identified with any spills or releases related to the former AST and soil borings taken during a previous Phase II investigation determined that all volatile organic compounds (VOCs) and DRO levels in the vicinity of the former AST were below reporting limits. Based on this information, the former AST represents a low potential impact risk to the site.

During this Limited Phase II investigation, GaiaTech collected groundwater and soil samples across the site. A total of four subsurface boreholes were advanced to a depth of 50 feet. Since no significant evidence of soil impacts was observed, the scope of work was focused on groundwater assessment in order to detect any significant site-wide impacts. Four groundwater samples and one soil sample were collected at the site and analyzed for VOCs, semi-VOCs (SVOCs), and Resource Conservation and Recovery Act (RCRA) metals.

Based upon conditions observed during sampling activities and the analytical results, GaiaTech concludes the following:

- One soil sample was collected from the site, which was located near the former AST on the northeastern portion of the site. No VOCs or SVOCs were detected in the soil sample. A low level of barium was detected in GP-2 at a concentration of 39.6 mg/kg, which is below the Soil Reference Value (SRV) of 1,200 mg/kg. Chromium was detected in GP-2 at a concentration of 7.1 mg/kg, which is below the SRV of 87 ug/kg. There are no impacts to the soil located near the former AST. No significant evidence of soil impacts were observed at the other boring locations.

- No SVOCs were detected in the groundwater samples collected from the site. Barium was detected in all four groundwater samples (GP-1 through GP-4) at concentrations below the Minnesota Drinking Water Criteria. 1,1,1-Trichloroethane and trans-1,2-dichloroethylene were detected in GP-4 at concentrations below the Minnesota Drinking Water Criteria. Tetrachloroethylene (PCE) and trichloroethylene (TCE) were detected in all of the groundwater samples (GP-1 through GP-4). The concentrations of PCE in all of the samples were in excess of the Drinking Water Criteria. The concentrations of TCE were in excess of the Drinking Water Criteria in GP-1, GP-2, and GP-4. It is likely that the PCE and TCE impacts detected in the site groundwater are from an off-site source since no soil contamination was identified at the site and the levels of PCE and TCE detected are relatively evenly distributed across the site. No source area was determined at the site. Since PCE and TCE were in excess of the Drink Water Criteria, the owner of the property may be required to notify the Minnesota Pollution Control Agency of these exceedances. Once the exceedances are reported to the MPCA, it is recommended that the site be enrolled into the MPCA Voluntary Investigation and Cleanup Program in order to obtain site closure and/or an off-site source determination.

- Peer Engineering, the environmental consultant for Turnstone Group LLC, is proposing to install a continuous 15-mil polyolefin vapor barrier and "passive" venting system beneath the sub-grade garage level of the building to be constructed at the subject site. The intent of the vapor barrier/passive venting system is to address potential vapor intrusion related to the chlorinated VOCs detected in the groundwater beneath the site. The components of the proposed system are consistent with typical radon-type mitigation systems, equipped with passive venting. An active venting system has an exhaust fan/vacuum blower on the discharge pipe for the system which depressurizes and removes the radon from below the

building's floor slab.

GaiaTech believes that the proposed system, as designed, should provide ample protection for potential vapor intrusion since the levels of VOCs detected in the groundwater are relatively low and the depth to groundwater is approximately 45 feet. Also, the proposed system should provide some protection to the building from radon. However, GaiaTech recommends that radon sampling/testing be performed in the building, once it has been constructed, to ensure the radon levels are not in excess of the EPA Action Level of 4.0 pCi/L (as the site is in an area classified as Zone 1, with a potential indoor average radon screening level greater than 4.0 pCi/L). If the radon sampling/testing indicate radon levels in excess of the EPA Action Level, GaiaTech recommends installing an electric exhaust fan(s) on the discharge pipe(s) of the passive venting system to adequately address the potential radon issue.

1.0 INTRODUCTION

BlackRock Realty retained GaiaTech Incorporated (GaiaTech) to conduct a Phase II Site Investigation of the Lyndale Apartments property located at 2829 and 2833 Lyndale Avenue South in Minneapolis, Hennepin County, Minnesota (the site). The investigation was conducted to assess potential impacts identified in the Phase I Environmental Assessment (ESA) performed by GaiaTech in October 2007. A description of the purpose, methodology and results of this evaluation is provided in this report.

1.1 Site Background

The 2833 Lyndale Avenue South property is a 1.02-acre parcel of land, while the 2829 Lyndale Avenue South property is a 0.13-acre parcel of land. Both parcels are currently being redeveloped with a multi-family, 6-story apartment complex with a sub-grade parking structure. At the time of GaiaTech's site reconnaissance, the western half of the site was being excavated to a depth of approximately 11 feet below ground surface (bgs) in preparation for construction of the sub-grade parking structure.

The 2833 Lyndale Avenue South property had been residentially developed since at least 1889. Prior to 1950, historical occupants and operations included a telephone company (T.C. Telephone Company), a lumber company (Bruer Brothers Lumber), a coal company (Berwind Coal Company), plumbing and heating supply, insulation manufacturing, chimney cleaning, and boiler repair. From 1950 until 2006, the property was occupied by a construction company. According to information reviewed, an oil/water separator; a 350-gallon used oil AST; and potential outdoor storage of materials was present at the property as part of the construction company's operations. Vehicle maintenance was also performed on the eastern portion of the 2833 Lyndale Avenue South property. The 2829 Lyndale Avenue South property had been developed with a residential apartment structure since 1908.

The Phase I ESA identified the following areas of environmental concern in connection with the site which warranted further investigation:

- **Historical Site Operations**: The site has been developed and utilized since the late 1800s for various commercial operations including a lumber company, a coal company, insulation manufacturing, chimney cleaning, and boiler repair. Since 1950, vehicle maintenance was reportedly conducted at the site. Although no specific significant releases or impacts were identified in the historical information reviewed, these past operations represent a potential impact risk to the site.

- **Former Oil/Water Separator**: An oil/water separator was located in the former westerly-located warehouse structure at the site. During a previous Phase II

investigation conducted at the site, elevated levels of DRO (18 milligrams per kilogram) were identified in a hand auger sample taken in the vicinity of the oil/water separator. The former oil/water separator represents a potential conduit for contaminants to have entered the soil in this area and is considered a potential impact concern to the site.

- **Former Aboveground Storage Tank (AST)**: The site was identified in the database report as having a 350-gallon used oil AST that was located adjacent to the south of the easterly-located storage building. Although still listed "active" by the MPCA, site representatives stated that the tank was removed circa 2006. GaiaTech did not observe any evidence of ASTs during the site reconnaissance. The AST reportedly lacked an overfill/spill containment system or a concrete pad beneath the tank. The site was not identified with any spills or releases related to the former AST and soil borings taken during a previous Phase II investigation determined that all VOC and DRO levels in the vicinity of the former AST were below reporting limits. Based on this information, the former AST represents a low potential impact risk to the site.

1.2 Scope of Work

On October 29 and 30, 2007 GaiaTech conducted field activities of the Phase II scope of work. The activities are described below.

- Former Oil/Water Separator: One soil boring (GP-4) was installed near the former location of the oil/water separator. One groundwater sample was collected and analyzed for VOCs, SVOCs, and RCRA metals.

- Former AST: One soil boring (GP-2) was installed near the former location of the AST. One groundwater sample and one soil sample were collected and analyzed for VOCs, SVOCs, and RCRA metals.

- Historical Site Operations: Two borings (GP-1 and GP-3) were installed on the southern portion of the property to provide site-wide coverage. Two groundwater samples were collected and analyzed for VOCs, SVOCs, and RCRA metals.

1.3 Geology and Hydrogeology

The 7.5-minute topographic map of the area (*Minneapolis South, Minnesota* quadrangle, 1967, photorevised 1993) indicates that the site is located at an approximate elevation of 870 feet above mean sea level. Prior to current grading activities the site was relatively flat. The southern border of the site slopes to the south toward a former railroad line. The general area slopes gently to the east toward the Mississippi River which is located

approximately 3.5-miles east of the site.

According to the USDA Soil Conservation Service Web Soil Survey and Soil Data Mart, the soil at the site consists of Urban land-Hubbard complex. Hubbard soils consist of deep, excessively drained sandy soils. Hubbard soils feature very rapid permeability and internal drainage. According to information from the Minnesota Geological Survey and information from a previous report bedrock in the vicinity of the site is the Middle Ordovician, St. Peter Sandstone, and is approximately 250 feet bgs. Area topography indicates that groundwater in the immediate site area and in the regional area may flow to the east toward the Mississippi River. Based on information from previous geotechnical studies recorded federal and state well database information provided by EDR, and surrounding topography, groundwater is expected to be encountered within 45 feet of the ground surface.

Boreholes were advanced to a depth of 50 feet bgs. The subsurface materials typically encountered at the site consisted of brown sand. Groundwater was encountered at a depth of approximately 45 feet bgs.

1.4 Previous Subsurface Investigation

A Phase II Environmental Site Assessment was performed at the site by Braun for Urban Anthology and Bremer Bank in February, 2006. This Phase II was conducted based on the recommendation of the previously completed Braun for Urban Anthology and Bremer Bank Phase I report for the site. Two soil borings and one hand auger boring were advanced at the site. The soil borings were advanced as close to the AST as possible, while the hand auger sample was taken near the oil/water separator within the westerly-located warehouse building. During the field investigation, PID readings from the three samples ranged from 1.1 parts per million (ppm) to 8.2 ppm. Samples were analyzed for VOCs and DRO, and with the exception of DRO at the hand auger sample (18 milligrams per kilogram), the samples were all below the laboratory method reporting limits.

2.0 SOIL SAMPLING

2.1 Methodology

Prior to commencing field activities, GaiaTech completed a subsurface utility clearance through the Gopher State One Call.

On October 29 and 30, 2007, GaiaTech installed a total of four soil borings at the site, as shown on Figure 2, to assess potential impacts to the site soil. Each of the soil borings was completed using either a hollow-stem auger drill rig and/or a Geoprobe. Subsurface soil samples were collected using either 4-foot macro core liners or 2-foot spilt-spoon sampling tubes. Upon retrieval from the sampling tube, each soil sample was visually inspected for logging purposes and evidence of contamination. Each soil sample was then collected into separate sample bags to be used for field-screening (described further below) and classification prior to collecting soil samples for laboratory analysis. Soil characteristics such as soil type, color, moisture, consistency, grain size, odor, and plasticity were recorded on soil boring logs. Copies of these logs are attached.

Upon completion of the soil boring, each of the soil samples underwent field screening for ionizable volatile organics contamination using a Mini-Rae photo-ionization detector (PID) equipped with a 10.6eV lamp, calibrated to a 100 volumetric parts per million (Vppm) isobutylene standard. The field screening is used to provide an indication of the potential presence of VOCs to aid in the selection of samples for laboratory analysis. During the investigation, the PID that was used onsite malfunctioned. Therefore, only one soil sample was screened using the PID. Specific PID field screening procedures were as follows:

- The soil sample was placed in a sample bag.
- The soil boring number and sample depth was written on the sample bag.
- The sample was allowed to warm up under ambient temperatures.
- The PID was utilized to draw the headspace from above the soil-air interface.
- The maximum PID reading was recorded on each respective soil boring log.

Typically, one soil sample from each boring in which field screening suggested the greatest potential VOC content or other impact was retained for possible laboratory analysis. The samples were then secured in a sample cooler and preserved with ice. Under strict sample chain-of-custody procedures, the samples were delivered to NE Technical Laboratory in Virginia, Minnesota.

Upon completion of soil boring and sampling activities, and between uses to avoid cross contamination, all down-hole soil boring and non-dedicated sampling equipment was decontaminated using an Alconox®/water wash and scrubbing, followed by a potable water rinse. Once the last soil sample and groundwater sample was retrieved from a boring

location, the borehole was back-filled with bentonite grout, and the surface was substantially restored (to the extent feasible) to its original condition.

2.2 Soil Regulatory Standards

GaiaTech compared all soil results to the Tier 1 Soil Reference Values (SRVs) provided in the Minnesota Pollution Control Agency Risk-Based Guidance for Soil – Human Health Pathway, dated May 2007.

2.3 Soil Sampling Results

One soil sample was collected from the boring (GP-2 4-8 feet) installed in the vicinity of the former AST, located on the northeastern portion of the property. The soil sample was laboratory-analyzed for VOCs, SVOCs, and RCRA metals. Soils in all of the borings did not exhibit any suspect staining or odors. The soil sampling results are summarized below, and are presented in Table 1. The approximate locations of the borings are shown on Figure 2. Complete laboratory analytical reports are included in Appendix C.

Former AST

No VOCs or SVOCs were detected in soil sample GP-2. A low level of barium was detected in GP-2 at a concentration of 39.6 mg/kg, which is below the SRV of 1,200 mg/kg. Chromium was detected in GP-2 at a concentration of 7.1 mg/kg, which is below the SRV of 87 ug/kg.

2.4 Discussion

One soil sample was collected from the site, in the vicinity of the former AST located on the northeastern portion of the site building. No VOCs of SVOCs were detected in the soil sample. Low levels of barium and chromium were detected in the soil sample at concentrations below the applicable SRVs. There are no impacts to the soil located near the former AST. No significant evidence of soil impacts were observed at the other boring locations. As no significant evidence of soil impacts were observed, the scope of work was focused on groundwater assessment to detect any significant impacts.

3.0 GROUNDWATER SAMPLING

3.1 Methodology

As part of the subsurface sampling activities conducted on October 29 and 30, 2007, four temporary monitoring wells were installed through the center of boreholes (GP-1 through GP-4) to assess the groundwater at the site. The approximate locations of the boreholes are shown on Figure 2. Boring logs are contained in Appendix A.

The temporary well points were screened to intercept the groundwater beneath the site. Development was accomplished by the use of a check valve and tubing. Groundwater samples were collected through new tubing utilizing a check valve, and were transferred into appropriate laboratory supplied bottles. The samples were then secured in a sample cooler and preserved with ice. Under strict sample chain-of-custody procedures, the sample was delivered to NE Technical Laboratory in Virginia, Minnesota.

3.2 Groundwater Regulatory Standards

GaiaTech compared all groundwater results to the Drinking Water Criteria provided in Minnesota Pollution Control Agency Ground Water Guidance Document, revised January 2003.

3.3 Groundwater Sampling Results

The groundwater samples collected from the temporary wells in the boreholes (GP-1 through GP-4) were analyzed for VOCs, SVOCs, and RCRA metals. The sampling results are summarized below, and are presented in Table 2. The approximate locations of the boreholes are shown on Figure 2. Complete laboratory analytical reports are included in Appendix C.

Historical Site Operations

No SVOCs were detected in GP-1 and GP-3. Tetrachloroethylene (PCE) was detected in GP-1 and GP-3 at concentrations of 45 ug/L and 51 ug/L, respectively, which are in excess of the Drinking Water Criteria of 5 ug/L. Trichloroethylene (TCE) was detected in GP-1 and GP-3 at concentrations of 6.7 ug/L and 4.4 ug/L, respectively. The concentration of TCE in GP-1 is in excess of the Drinking Water Criteria of 5 ug/L. Barium was detected in GP-1 and GP-3 at concentrations of 89.9 ug/L and 102 ug/L, respectively, which are below the Drinking Water Criteria of 2,000 ug/l.

Former Oil/Water Separator

No SVOCs were detected in GP-4. 1,1,1-Trichloroethane was detected in GP-4 at a concentration of 1 ug/L, which is below the Drinking Water Criteria of 200 ug/L. Trans-1,2-Dichloroethylene was detected in GP-4 at a concentration of 1 ug/L, which is below the Drinking Water Criteria of 100 ug/L. PCE was detected in GP-4 at a concentration 51 ug/L, which is in excess of the Drinking Water Criteria of 5 ug/L. TCE was detected in GP-4 at a concentration 12 ug/L, which is in excess of the Drinking Water Criteria of 5 ug/L. Barium was detected in GP-4 at a concentration of 79.6 ug/L, which is below the Drinking Water Criteria of 2,000 ug/L.

Former AST

No SVOCs were detected in GP-2. PCE was detected in GP-2 at a concentration 38 ug/L, which is in excess of the Drinking Water Criteria of 5 ug/L. TCE was detected in GP-2 at a concentration 6.4 ug/L, which is in excess of the Drinking Water Criteria of 5 ug/L. Barium was detected in GP-2 at a concentration of 90.7 ug/L, which is below the Drinking Water Criteria of 2,000 ug/L.

3.4 Discussion

No SVOCs were detected in the groundwater samples collected from the site. Barium was detected in all four groundwater samples (GP-1 through GP-4) at concentrations below the Minnesota Drinking Water Criteria. 1,1,1-Trichloroethane and trans-1,2-dichloroethylene were detected in GP-4 at concentrations below the Minnesota Drinking Water Criteria. PCE and TCE were detected in all of the groundwater samples (GP-1 through GP-4). The concentrations of PCE in all of the samples were in excess of the Drinking Water Criteria. The concentrations of TCE were in excess of the Drinking Water Criteria in GP-1, GP-2, and GP-4. It is likely that the PCE and TCE impacts detected in the site groundwater are from an off-site source since no soil contamination was identified at the site and the levels of PCE and TCE detected are relatively evenly distributed across the site. No source area was determined at the site. Since PCE and TCE were in excess of the Drink Water Criteria, the owner of the property may be required to notify the Minnesota Pollution Control Agency of these exceedances. Once the exceedances are reported to the MPCA, it is recommended that the site be enrolled into the MPCA Voluntary Investigation and Cleanup Program in order to obtain site closure and/or an off-site source determination.

4.0 CONCLUSIONS AND RECOMMENDATIONS

GaiaTech completed a Limited Phase II Site Investigation of the Lyndale Apartments property located at 2829 and 2833 Lyndale Avenue South in Minneapolis, Minnesota. Four groundwater and one soil samples were collected from the site and analyzed for VOCs, SVOCs, and RCRA metals.

The investigation indicated the following:

- One soil sample was collected from the site, which was located near the former AST on the northeastern portion of the site. No VOCs or SVOCs were detected in the soil sample. A low level of barium was detected in GP-2 at a concentration of 39.6 mg/kg, which is below the SRV of 1,200 mg/kg. Chromium was detected in GP-2 at a concentration of 7.1 mg/kg, which is below the SRV of 87 ug/kg. There are no impacts to the soil located near the former AST. No significant evidence of soil impacts were observed at the other boring locations.

- No SVOCs were detected in the groundwater samples collected from the site. Barium was detected in all four groundwater samples (GP-1 through GP-4) at concentrations below the Minnesota Drinking Water Criteria. 1,1,1-Trichloroethane and trans-1,2-dichloroethylene were detected in GP-4 at concentrations below the Minnesota Drinking Water Criteria. PCE and TCE were detected in all of the groundwater samples (GP-1 through GP-4). The concentrations of PCE in all of the samples were in excess of the Drinking Water Criteria. The concentrations of TCE were in excess of the Drinking Water Criteria in GP-1, GP-2, and GP-4. It is likely that the PCE and TCE impacts detected in the site groundwater are from an off-site source since no soil contamination was identified at the site and the levels of PCE and TCE detected are relatively evenly distributed across the site. No source area was determined at the site. Since PCE and TCE were in excess of the Drink Water Criteria, the owner of the property may be required to notify the Minnesota Pollution Control Agency of these exceedances. Once the exceedances are reported to the MPCA, it is recommended that the site be enrolled into the MPCA Voluntary Investigation and Cleanup Program in order to obtain site closure and/or an off-site source determination.

- Peer Engineering, the environmental consultant for Turnstone Group LLC, is proposing to install a continuous 15-mil polyolefin vapor barrier and "passive" venting system beneath the sub-grade garage level of the building to be constructed at the subject site. The intent of the vapor barrier/passive venting system is to address potential vapor intrusion related to the chlorinated VOCs detected in the groundwater beneath the site. The components of the proposed system are consistent with typical radon-type mitigation systems, equipped with passive venting. An active venting system has an exhaust fan/vacuum blower on the discharge pipe for the system which depressurizes and removes the radon from below the building's floor slab.

GaiaTech believes that the proposed system, as designed, should provide ample protection for potential vapor intrusion since the levels of VOCs detected in the groundwater are relatively low and the depth to groundwater is approximately 45 feet. Also, the proposed system should provide some protection to the building from radon. However, GaiaTech recommends that radon sampling/testing be performed in the building, once it has been constructed, to ensure the radon levels are not in excess of the EPA Action Level of 4.0 pCi/L (as the site is in an area classified as Zone 1, with a potential indoor average radon screening level greater than 4.0 pCi/L). If the radon sampling/testing indicate radon levels in excess of the EPA Action Level, GaiaTech recommends installing an electric exhaust fan(s) on the discharge pipe(s) of the passive venting system to adequately address the potential radon issue.

5.0 LIMITATIONS

GaiaTech performed this investigation on behalf of and exclusively for BlackRock Realty. This report and the findings contained herein shall not be relied upon, in whole or in part, by any other party, except by or with the express written consent of a responsible official of GaiaTech. Any reliance upon this report by third parties beyond its intended purpose shall be at such parties' sole risk.

GaiaTech has conducted these professional services in accordance with current scientific principles and industrial standards of practices in the fields of environmental science and engineering on the date the work was conducted and in the same geographical area of the subject site for similar studies. GaiaTech's findings and recommendations must be considered as professional opinions based upon the limited data collected during the course of the environmental site investigation, which is limited in time and scope. GaiaTech makes no warranty, express or implied.

Only a limited number of groundwater and soil samples were collected. The variations among these samples and results may not become evident until further investigation. In the event that more data are available, it may be necessary to re-assess the conditions of the subject site in order to revise the conclusions and recommendations contained in this report.

Independent laboratories have performed analytical laboratory analyses. GaiaTech has derived the findings and recommendations, in part, from the analytical reports. These findings are contingent upon the validity of the analytical reports.

Limited groundwater and soil samples were analyzed for specific parameters as detailed in the report. Other chemical compounds, which were not analyzed for, may exist at the site, although unlikely based upon available information regarding the subject site identified during the Phase I ESA.

1.0 INTRODUCTION

Peer Engineering, Inc. (Peer) was retained by Lyndale Redevelopment LLC to document implementation of the Response Action Plan (RAP) dated December 5, 2007 for the Murals of Lynlake redevelopment project located at 2829 and 2833 Lyndale Avenue South in Minneapolis, Minnesota (the Property). The response actions completed included installation of vapor mitigation/engineering controls (i.e. a passive venting system and vapor retarder/barrier) beneath the sub-grade parking level of the new, multilevel apartment building. The vapor mitigation controls were installed to address potential vapor intrusion related to ground water contamination underlying the Property. The redevelopment activities were completed at the Property between August 2007 and September 2008. RAP implementation activities were completed between February 2008 and July 2008.

2.0 BACKGROUND INFORMATION

2.1 SITE LOCATION AND DESCRIPTION

The Property consists of two parcels including 2829 Lyndale Avenue South which is 0.13 acres in size and 2833 Lyndale Avenue South which is 1.02 acres in size. The Property is bordered on the north by commercial buildings along Lyndale Avenue South and single and two-family residential structures along Garfield Avenue South, on the west by Lyndale Avenue South and additional commercial and office buildings, on the south by the Hennepin County Regional Railroad Authority trail, and on the east by Garfield Avenue South and a community garden (see Figure 1). A copy of a pre-construction survey showing the Property boundaries is included as Figure 2.

The Property was redeveloped between August 2007 and September 2008 with a two to six story apartment building with one level of sub-grade parking beneath the entire building footprint. The ground level of the building along Lyndale Avenue South also includes mixed-use commercial space. Lyndale Redevelopment LLC currently owns and redeveloped the Property.

2.2 ENVIRONMENTAL REPORTS/CONDITIONS

As part of redevelopment-related environmental due diligence, the following environmental reports were prepared for the Property and are on file at the Minnesota Pollution Control Agency (MPCA) Voluntary Investigation & Cleanup (VIC) Program (VP24010):

1. Phase I Environmental Site Assessment, Two Buildings, 2833 Lyndale Avenue South, Minneapolis, Minnesota, prepared by Braun Intertec (Braun), dated October 3, 2005 (the "2005 Phase I ESA").

2. Phase II Environmental Site Assessment, Soo Line Flats, 2833 Lyndale Avenue South, Minneapolis, Minnesota, prepared by Braun, dated March 20, 2006 (the "2006 Phase II ESA").

3. Phase I Environmental Site Assessment, Lyndale Apartments, 2829 and 2833 Lyndale Avenue South, Minneapolis, Minnesota, prepared by GaiaTech Incorporated (GaiaTech), dated October, 2007 (the "2007 Phase I ESA").

4. Limited Phase II Site Investigation, Lyndale Apartments, 2829 & 2833 Lyndale Avenue South, Minneapolis, Minnesota, prepared by GaiaTech, dated November 30, 2007 (the "2007 Limited Phase II Investigation").

5. Response Action Plan, Murals of Lynlake, 2829 & 2833 Lyndale Avenue South, Minneapolis, Minnesota, prepared by Peer, dated December 5, 2007 (the "RAP").

6. Additional Investigation Results Summary, Murals of Lynlake, 2829 & 2833 Lyndale Avenue South, Minneapolis, Minnesota, dated January 29, 2008.

7. Additional Investigation, Murals of Lynlake, 2829 & 2833 Lyndale Avenue South, Minneapolis, Minnesota, prepared by Peer, dated March 19, 2008 (the "2008 Additional Investigation").

8. Affidavit Concerning Real Property Contaminated with Hazardous Substances (Affidavit) dated October 8, 2008; recorded with the Hennepin County Registrar of Titles as Abstract and Torrens on October 9, 2008.

The 2006 Phase II ESA evaluated several recognized environmental conditions (RECs) identified for the 2833 Lyndale parcel of the Property by the 2005 Phase I ESA. The RECs evaluated included an aboveground storage tank (AST) for used engine oil, past storage of railroad ties, and an oil/water separator. The 2006 Phase II ESA did not identify any obvious contamination with the exception of 18 milligrams per kilogram (mg/kg) diesel range organics (DRO), which was detected in a shallow soil sample collected adjacent to the oil/water separator.

The 2007 Limited Phase II Investigation determined that ground water beneath the Property, which was encountered at a depth of approximately 45 feet below ground surface (bgs), was contaminated with chlorinated volatile organic compounds (VOCs), primarily tetrachloroethylene (also referred to as perchloroethylene or PCE) and its related degradation products (i.e. trichloroethylene or TCE, trans-1,2-dichloroethylene, and 1,1,1-trichloroethane).

The 2008 Additional Investigation was conducted to support issuance of an Off-Site Source Determination for the identified ground water contamination. PCE was detected in ground water samples from three monitoring wells installed as part of the investigation at concentrations that ranged from 33 micrograms per liter (ug/l) to 94 ug/l. In addition, TCE was detected in the ground water samples at concentrations that ranged from 4.9 ug/l to 19 ug/l. The PCE and TCE concentrations in the ground water samples exceeded the Minnesota Department of Health (MDH) Health Risk Levels (HRLs) of 5 ug/L. Based on the calculated ground water flow direction (east-southeast) and distribution of PCE and TCE in the monitoring wells, it was concluded that the source of the PCE and TCE is located off-site, to the northwest of the Property.

Soil gas sampling conducted for the 2008 Additional Investigation identified PCE, the primary contaminant of concern detected in ground water at the Property, in the shallow soil at concentrations exceeding the MPCA "draft" Residential Vapor Intrusion Screening Value (ISV) of 8 micrograms per cubic meter (ug/m^3).

Peer prepared the December 5, 2007 RAP which included a design for vapor mitigation/engineering controls (i.e. a passive venting system and vapor retarder/barrier) beneath the sub-grade parking level of the new building. The purpose of installing the engineering controls was to protect the new building and future occupants from possible vapor intrusion related to the identified ground water contamination and subsurface vapor impacts. As described in this report, the RAP was implemented in February 2008 and completed in July 2008.

2.3 MPCA APPROVALS/ASSURANCES

To date, the MPCA VIC Program has issued the following technical approvals and assurances related to redevelopment of the Property:

- Response Action Plan Approval Letter dated December 26, 2007 to Lyndale Redevelopment LLC.

- Off-Site Source Determination Letter dated March 27, 2008 to Lyndale Redevelopment LLC for the identified ground water contamination at the Property.

- No Association Determination (NAD) Letter dated March 28, 2008 to Granite Lyndale Greenway LLC (a potential buyer of the Property).

The March 28, 2008 NAD Letter indicated the determination was subject to preparation and recording of an Affidavit with the County Recorder to document the environmental condition of the Property. The Affidavit was recorded on October 9, 2008 (see Section 2.2). The March 28, 2008 NAD Letter also indicated it was subject to installing and maintaining the vapor barrier and passive venting system as described in the RAP.

2.4 FORMER MONITORING WELLS

Following MPCA's issuance of the Off-Site Source Determination Letter, Peer retained Aqua-Plus, Inc. (Aqua-Plus) of Elk River, Minnesota to seal the monitoring wells (MW-1, MW-2 and MW-3) previously installed at the Property as part of the Additional Investigation. Aqua-Plus sealed the monitoring wells in accordance with MDH regulations on April 17, 2008. The former monitoring wells locations are shown on Figure 2. Copies of the MDH Well Sealing Records are included in Appendix A.

3.0 RESPONSE ACTION IMPLMENTATION

3.1 GENERAL

Response actions were completed at the Property as part of redevelopment between February 2008 and July 2008 in accordance with the MPCA-approved RAP. The response actions completed included installation of vapor mitigation controls including a passive venting system and vapor barrier beneath the sub-grade parking level of the new building. The vapor mitigation controls were installed by Weis Builders (the general contractor for redevelopment) and its subcontractors. Specifications for the passive venting system and vapor barrier are included the RAP. Peer conducted periodic observations to document that the passive venting system and vapor barrier were installed in accordance with the specifications. Photographic documentation of the passive venting system and vapor barrier installation is included in Appendix B.

3.2 PASSIVE VENTING SYSTEM

A passive (sub-slab) venting system was installed beneath the floor slab of the sub-grade parking level of the building. The sub-grade parking level is used by residents and commercial tenants for automotive parking, and has limited storage and mechanical spaces. The passive venting system includes four vapor vents each consisting of a suction pit and related vent piping. The vapor vent locations shown on Figure 3. Each vapor vent was constructed as follows:

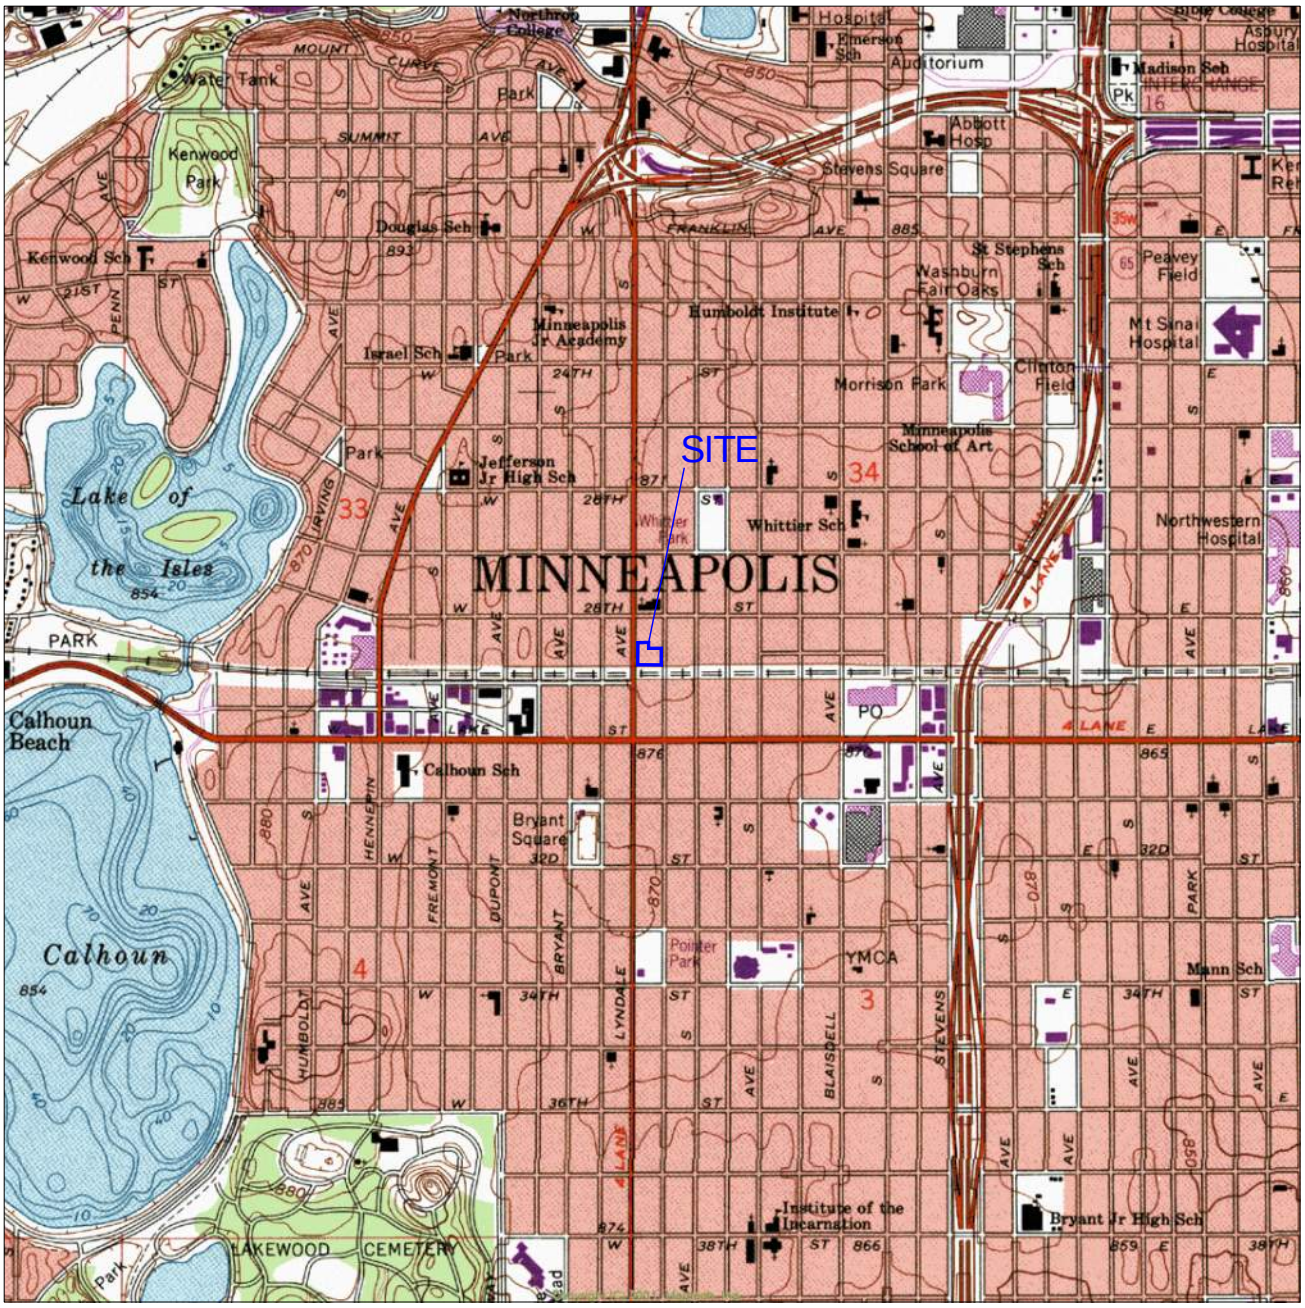
- A 16-inch diameter by 6-inch high galvanized steel suction pit bedded "pea" gravel to enhance air flow was installed beneath the floor slab (see Photograph 1 of Appendix B).

- Rigid 4-inch PVC vent piping was connected to the suction pit and extended beneath and exited through the floor slab near each suction pit location (see Photograph 2 of Appendix B).

- The PVC piping was transitioned to 4-inch diameter cast iron piping and cleanouts were installed where the PVC piping for each vapor vent exited the floor slab in the

sub-grade parking level of the building. The cast iron vent piping was extended vertically through the building (see Photograph 3 of Appendix B). The vent piping was transitioned to PVC within 35 feet of the roof to meet building code.

- Wind-driven turbine ventilators were installed on the vent piping where it exhausted from the building roof. Electrical connections were installed on the building roof, so that if warranted in the future, the turbine ventilators can be replaced with electric powered blowers.



3.3 VAPOR BARRIER

- Following installation of the suction pits, a vapor barrier was installed directly beneath the concrete floor slab of the entire footprint of the building's sub-grade parking level. The vapor barrier consists of 15-mil polyolefin geomembrane (Stego Wrap) manufactured by Stego Industries (see Photograph 4 of Appendix B). The vapor barrier was mechanically fastened to the building walls and columns (see Photograph 5 of Appendix B). Seams in the vapor barrier were joined/sealed using HDPE adhesive backed tape (see Photograph 4 of Appendix B). Pipe and conduit penetrations through the vapor barrier were sealed using HDPE adhesive backed tape (see Photograph 6 of Appendix B).

4.0 SUMMARY AND CONCULSIONS

Response actions were completed at the Property as part of redevelopment between February 2008 and July 2008 in accordance with the MPCA-approved RAP. The response actions completed included installation of vapor mitigation controls including a passive venting system and vapor barrier beneath the sub-grade parking level of the new apartment building. The vapor mitigation controls were installed to address potential vapor intrusion into the new building from underlying chlorinated VOC ground water contamination related to an off-site source. As specified by the March 28, 2008 NAD Letter, the passive venting system and vapor barrier should be maintained as part of future operation of the building. In addition to the vapor mitigation controls installed in the new building, an Affidavit documenting the environmental condition at the Property has been recorded with the County Recorder.

LANDMARK Environmental

Nicole Bonde-Jones – Environmental Scientist

Project Role: Project Scientist, Phase I ESA Reporting
Education: M.S., Environmental Science, New Mexico State University
B.S., Environmental Science, University of Wisconsin – River Falls
Industry Experience: 7 years Certifications: OSHA HAZWOPER

Nicole has worked in Brownfield redevelopment for seven years and has over a year of experience working for Rice County Environmental Services in southeast Minnesota. Her experience includes conducting field investigations involving soil, soil vapor, and groundwater sampling, construction oversight and monitoring, contaminated soil waste profiling and disposal, and reporting for Phase I Environmental Site Assessments (ESAs), Phase II Investigations, Response Action Plans, and Response Action Implementation Reports.

Project Experience Examples, Role, Year

- Multiple MnDOT Corridors, Statewide (2020-Present) – Assisted on corridor Phase I ESAs for MnDOT, completing data reviews, site visits with write-ups, and quality control reviews.
- City of Minneapolis Bridges over Midtown Greenway (Grand & 18th Ave) (2023-present) – Prepared City of Minneapolis-style corridor Phase I ESAs for the two bridges, contracted with engineering firms.
- Multiple Minnesota Land Trust sites, Statewide (2020-Present) – Lead author for Phase I ESAs on multiple large-tract properties across the state. Many of the properties include former farm dumps or are adjacent to farm dumps.
- TKDA/MCES Crow River Interceptor, Rogers (2022) – Lead author of 3.5-mile corridor Phase I ESA for planned new wastewater pipe. Reviewed regulatory data, created figures, completed site reconnaissance and wrote report.
- CSAH 158/Vernon Avenue, Edina for Hennepin County (2021) – Assisted with corridor Phase I ESA in project corridor including multiple current and former dry cleaners and gas stations/auto repair shops.
- City of Minneapolis, 37th Avenue NE (2021) – Lead author of 1-mile corridor Phase I ESA. Identified documented releases, potential underground storage tanks, fill soil, and demolition debris; the Phase I ESA information was used to plan the Phase II Investigation completed in 2021.
- Hennepin County Hotels (2020) – Scientist for Phase I ESAs on four hotel properties in the metro for which the County is acquiring to use as homeless shelters.
- Eastbound Kellogg Boulevard Bridge for TKDA (2020) – Scientist for a corridor Limited Phase I ESA for road reconstruction. Thirty-three (33) REC sites identified for the less than one-mile corridor.
- Dinkytown Properties for North Bay (2020) – Lead author and scientist for environmental services including Phase I ESA, Phase II Investigation, and Response Action Plan.
- U.S. Bank Stadium for Minnesota Sports Facilities Authority (2014-2016) – Project scientist and field staff for response action implementation activities including excavation observation, observation of vapor retarder installation, vapor soil screening, and soil sampling. Co-authored response action implementation report that was approved by the MPCA. Also managed sampling, data, and reporting to the MPCA for the NPDES permit.

LANDMARK Environmental

Sherry Van Duyn, PE, CHMM – Principal

Project Role: Senior Review
Education: B.C.E Civil Engineering, University of Minnesota
Industry Experience: 35 years Certifications: PE, CHMM, SWPPP Designer, HAZWOPER

Sherry provides 36 years of experience in site remediation primarily in Brownfield redevelopment and road/civil construction projects. Her emphasis is in managing assessments, investigations, Response Action Plans, remediation design, construction management and oversight, cost estimating, hazardous building material removal, waste profiling and disposal, contaminated soil and water treatment, construction dewatering treatment and discharge, soil vapor mitigation systems, and vapor mitigation in utility corridors. **Sherry brings unique expertise to the team for successfully managing many large-scale, multi-media contamination projects for local government completing road corridors and civil projects.**

Project Experience, Role, Year

- Senior Review for Road Construction (2019-present) – Senior/Principal providing high-level review and assistance on road construction projects including the following:
    - TH 212 Sacred Heart (2023-present) – Construction Monitoring and Implementation Report
    - Eustis Street, Lauderdale for Ramsey County (2023-present) – Phase I ESA, Phase II ESA Work Plan, Phase II ESA, RAP/CCP
    - TH 169, North of Jordan for MnDOT (2022) – Construction Monitoring and Implementation Report
    - Hodgson Road, Shoreview for Ramsey County (2021) – Phase I ESA
    - TH 25, Watertown to Mayer for MnDOT (2019-2021) – Construction Monitoring and Implementation Report
- TH 12, Ortonville (2021-2022) – Project Manager for Construction Monitoring and Implementation Report; construction involved excavation in two contaminated materials areas (soil contamination).
- CSAH 158/Vernon Ave, Edina, Hennepin County (2021) – Senior Project Manager for the Phase I ESA, Phase II Investigation and Asbestos and Hazardous Materials Survey of the bridge over Soo Line Railroad. Dry cleaner, gas station and auto repair sites in area.
- Downtown East, City of Minneapolis (2020-2021) – Project Manager for four-block project northeast of US Bank Stadium; services included corridor Phase I ESA, Phase II Investigation, and Construction Oversight.
- Eastbound Kellogg Bridge, St. Paul for TKDA and City (2020-2021) – Project Manager for PreDemo Hazmat Survey, Phase I, Phase II, Response Action Plan and design for demolition of this downtown bridge by the Xcel Energy Center.
- CSAH 112, Long Lake for SRF and Hennepin County (2014-2021) – Project Manager for three phases of environmental work for a 3.7-mile corridor project, including multiple Phase I ESAs, Phase II ESAs, Response Action Plans, Design and Construction Monitoring of petroleum contaminated soil disposal, construction dewatering and treatment, and vapor mitigation for utilities, and contingency asbestos pipe.
- CSAH 81 Bridges, Minneapolis and Robbinsdale for SRF and Hennepin County (2018 – 2019) – Project manager for a Phase I, Phase II Investigation, Pre-Demolition Hazardous Materials Survey and assistance with soil reuse sampling.
- Rice Street, St. Paul for Bolton & Menk and Ramsey County (2019, 2022) – Principal for a Phase I Corridor Assessment, Work Plan, and Phase II Investigation including 97 low, medium, and high ranked sites.
- CSAH 53, Richfield for Hennepin County (2015-2018) – Project manager for the 3-mile corridor project for design and construction monitoring for lead, petroleum, and PCE contaminated soil removal, and vapor mitigation for utilities for petroleum and PCE contamination at a Superfund site. Contingencies included asbestos pipe and treated wood. Worked with Bolton & Menk during construction oversight.

LANDMARK Environmental

Tristin Faust – Geological Engineer, EIT PG (MN)

Project Roles: Field Oversight, Data Analysis, Conceptual Site Modeling, Report Production
Education: B.S. Geological Engineering. University of Wisconsin-Madison, 2017.
Industry Experience: 5 years
Training/Certifications: Engineer in Training (MN/WI), Geologist in Training (MN/WI), 40-hour OSHA HAZWOPER Certified, MDH Certified Asbestos Inspector

Tristin provides 5 years of experience in site investigation and remediation primarily in Brownfield redevelopment, Superfund site monitoring, and civil construction projects. He has experience with field oversight and management of remedial actions concerning contaminated soil treatment and disposal, construction dewatering treatment and discharge, groundwater monitoring, and soil vapor barrier and venting systems. He conducts soil, soil vapor, and groundwater investigations and prepares reports to determine the magnitude and extent of soil, soil vapor, and groundwater contamination at properties. Tristin inputs and manages large data sets in order to build complex 2D site maps and 3D conceptual site models assisting with remediation efforts at both Superfund and Brownfield sites.

Project Experience, Location (Years)

- Kurt Manufacturing, Fridley, MN (2017-Present) – Federal oversight investigation of groundwater and soil vapor impacts at a historic manufacturing plant in the north metro. Work includes deep bedrock borings completed with sonic drilling technology and a large-scale soil vapor investigation. Primary field staff for semi-annual groundwater monitoring events and production of annual monitoring reports for review by Environmental Protection Agency. Data analysis includes comparing laboratory data to relative and current State and Federal compliance criteria. Data analysis also includes 2D and 3D modeling of site data for conceptual site model: rendering site geological cross sections from boring data, chemical data interpretation and plume delineation, and static water level data from on-site monitoring wells and areawide wells. Real space 3D analysis of membrane interface probe (MIP) investigation data in 2019.
- Minnesota BioBusiness Center, Rochester, MN (2017-2020) – Completed groundwater sampling and reporting at former drycleaner site with bioremediation via injection that was carried out by Landmark. Data analysis and report preparation work included 2D and 3D conceptual site modeling, modeling contaminant plume concentrations, assessing bioremediation media concentrations, and modeling site ground water flow. The site was successfully bioremediated with the long-term monitoring completed and approved by the MPCA in 2020.
- The Shale Redevelopment, Minneapolis, MN (2018-2020) – Completed field work and report production from Phase II Investigation through Response Action Implementation. Work included removal of contaminated soil at the Property as well as a Limited Site Investigation for petroleum in soil and groundwater into bedrock. This included sonic borings to sample at the bedrock interface and beyond into the shallow bedrock at the site. Reporting duties included data analysis, conceptual site modeling, and LSI Report production. Contamination was successfully delineated, culminating a Site Closure determination issued by the MPCA in 2021.
- Valley Ridge Redevelopment, Burnsville, MN (2019-2020) – Primary field staff for groundwater remediation of a vacant, former strip mall site with chlorinated solvent contamination in the groundwater. Completed bioremediation via injection into ground water prior to redevelopment. In field duties included mixing the injection fluid batches, aiding the driller with injection pump system, maintaining on-site equipment and supplies for the month-long process, and post injection groundwater monitoring and sampling. Reporting duties included data analysis, conceptual site modeling, and implementation report production. Groundwater was successfully remediated, culminating in a No Further Action determination issued by the MPCA in September 2020.
