

FRANKLIN STEEL SQUARE

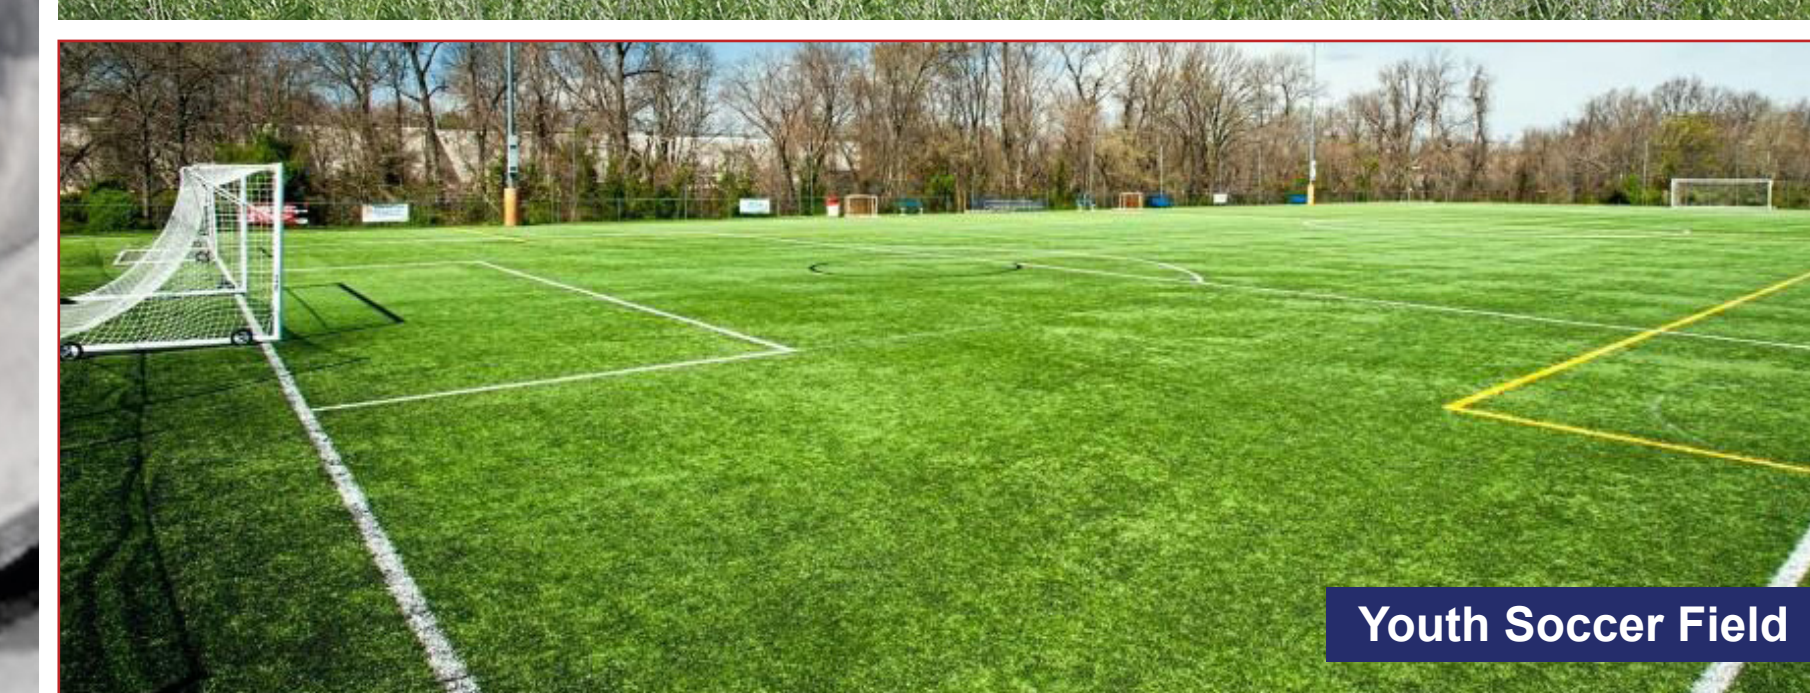

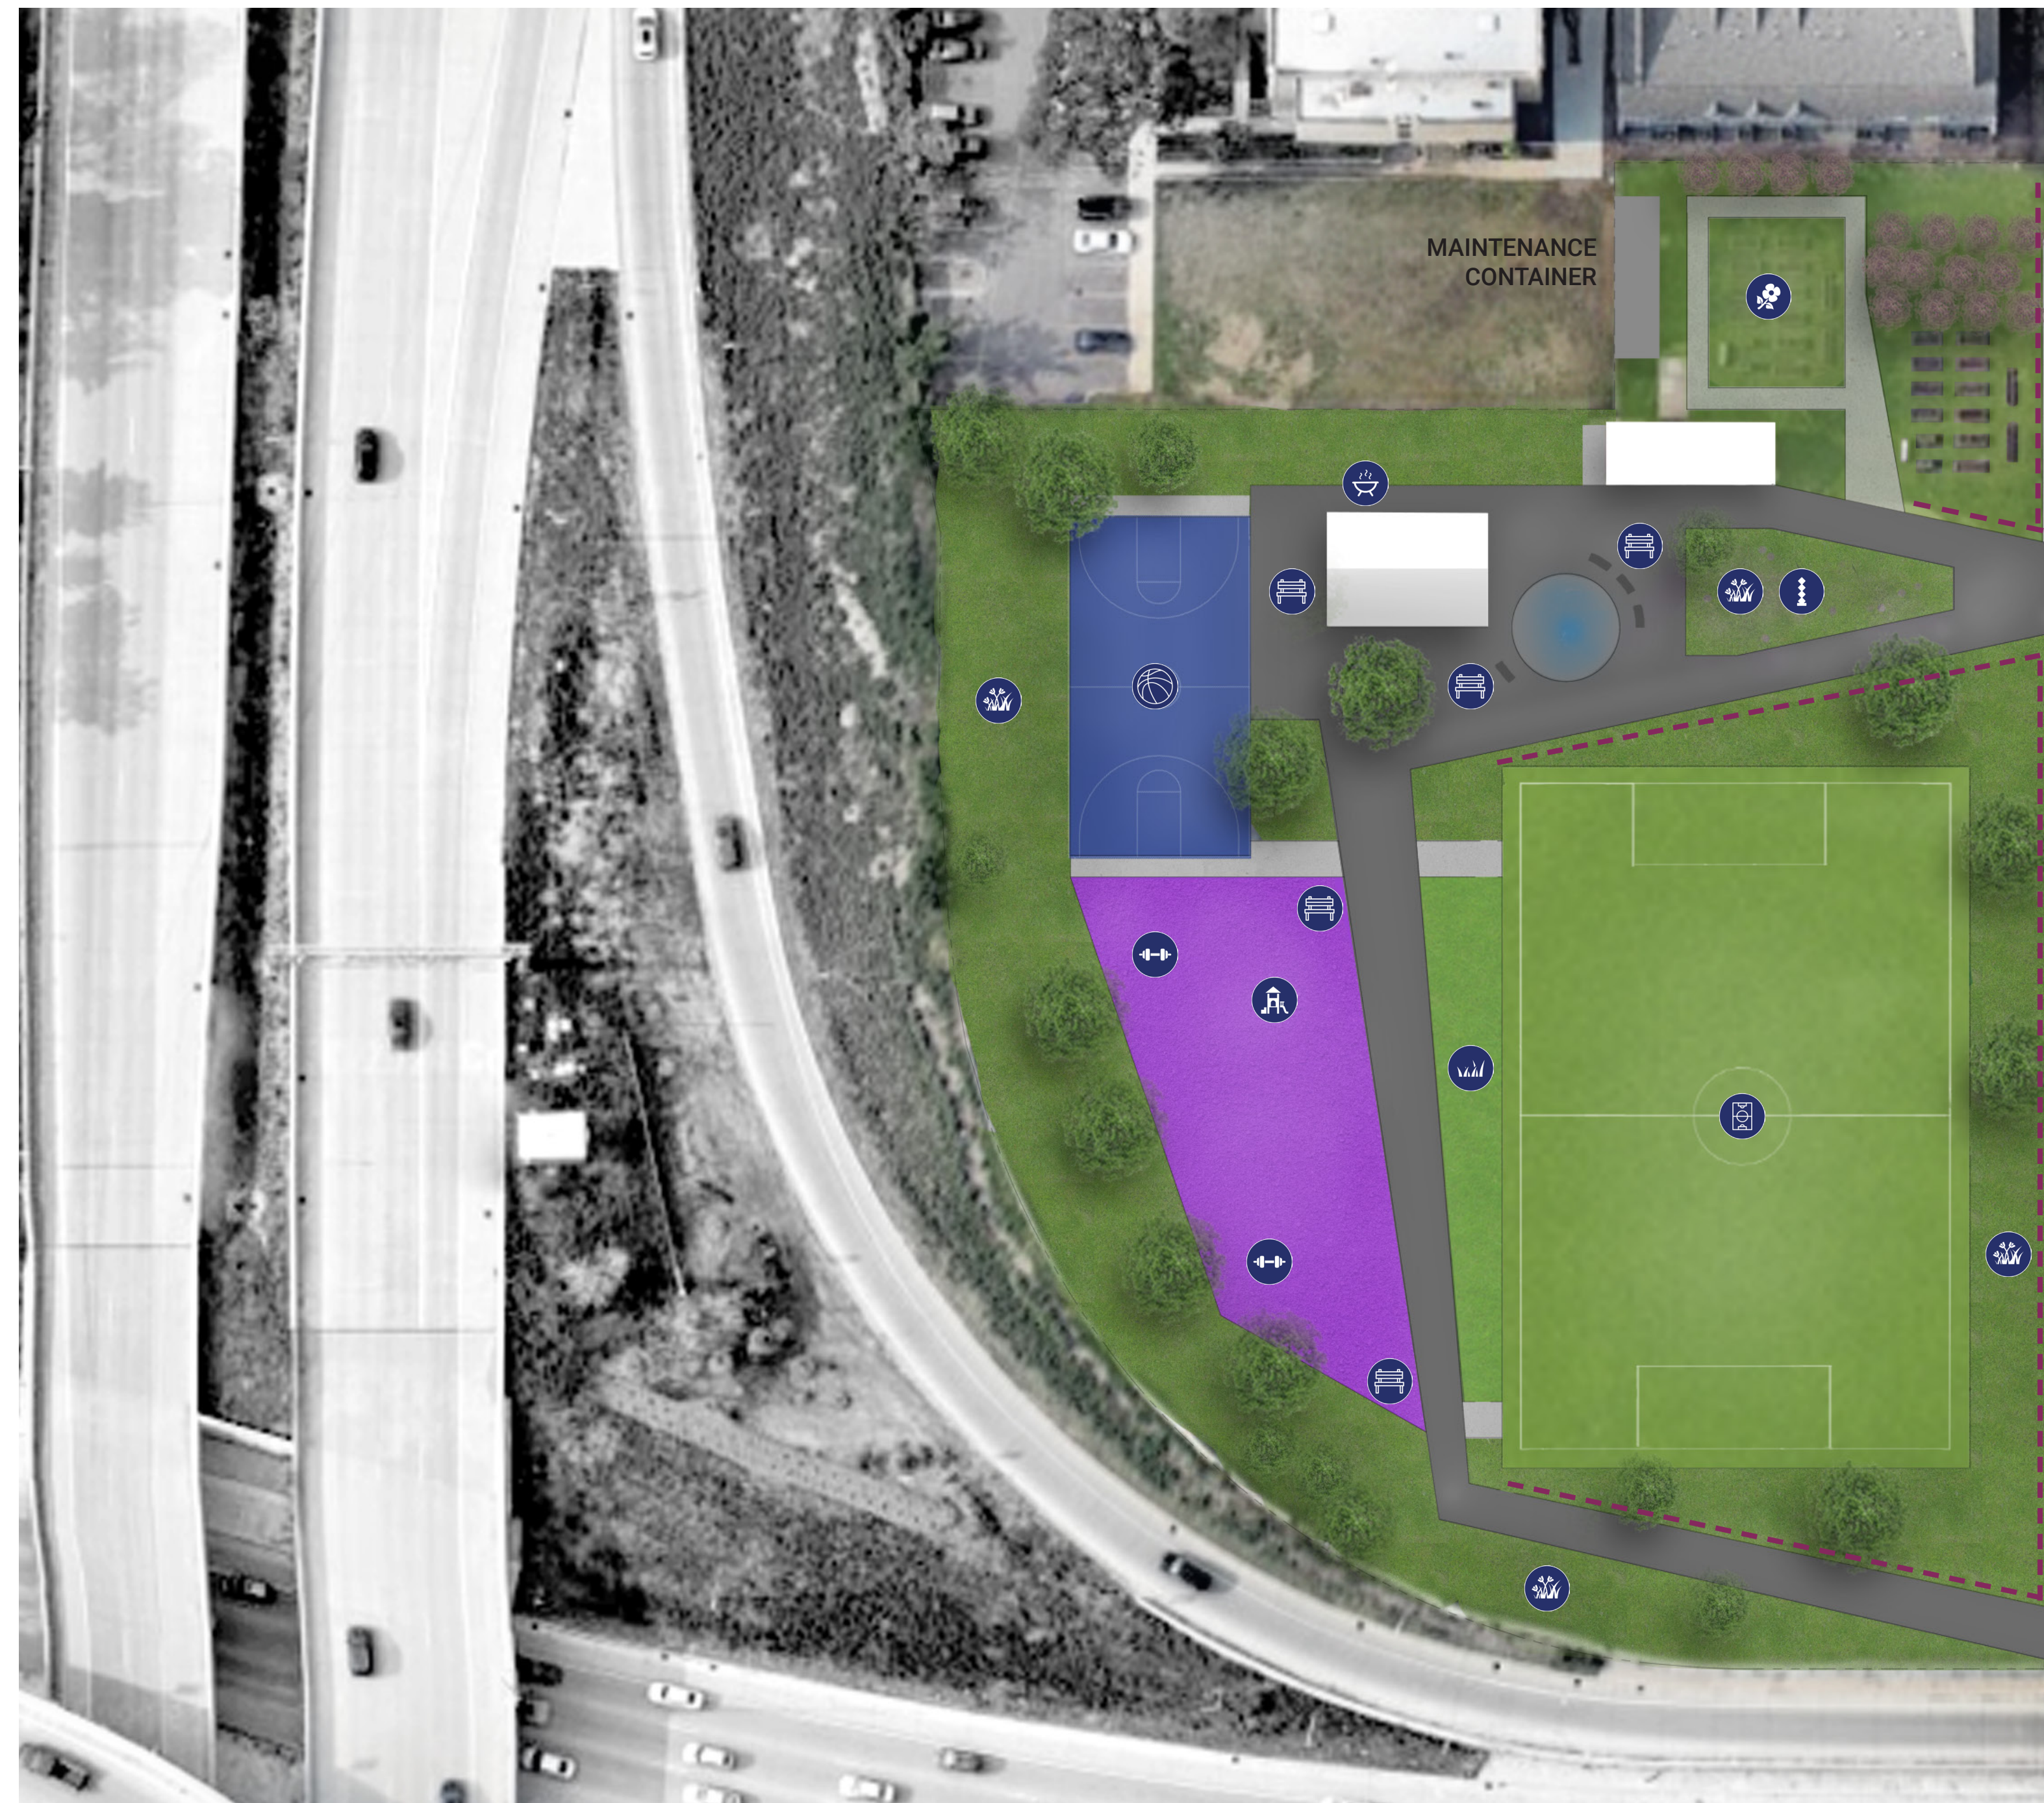

design concept: A

Design Concept A brings a new youth soccer field to the center of the park, with ornamental fencing and landscaping surrounding three sides of the edges. Additional lawn space is connected to the field on the west to allow for observing and flexible seating. The basketball court is proposed to relocate near the pavilion and upgrade to a full court. The playground is moved southeast of the pavilion and is updated to allow for youth to play and be active with a challenge course and new playground equipment. The design proposes to expand on the existing community gardening with additional beds and walking paths.

New walking paths surround the new soccer field and allow for a looped path that connects the new entrance into the park. The updated paths create a connection to all the features of the park and new amenities.

- Ornamental Fencing

FRANKLIN STEELE SQUARE

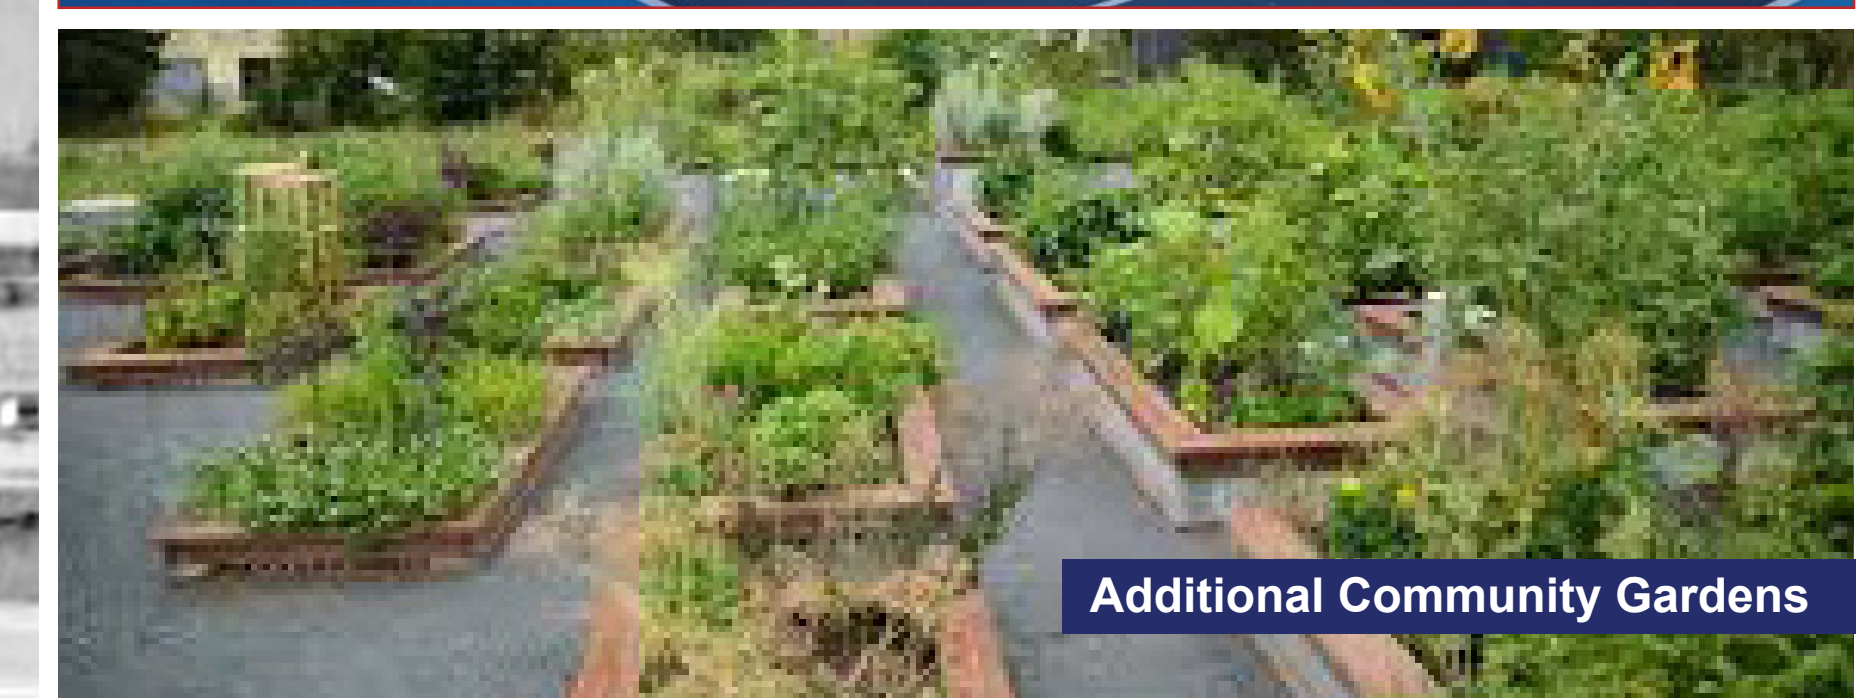

**Minneapolis
Park & Recreation Board**

design concept: *B*

Design Concept B provides activation around the center of the park, with a flexible lawn in the center. Activation around the lawn includes a new full court basketball court, updated and expanded splashpad, walking loops, and moving the playground to southeast to create more visibility and connection to the other park features. The playground includes updated play equipment and a new adult and youth challenge course that includes a timed 40-yard dash feature. The design proposes to expand on the existing community gardening with additional beds and walking paths.

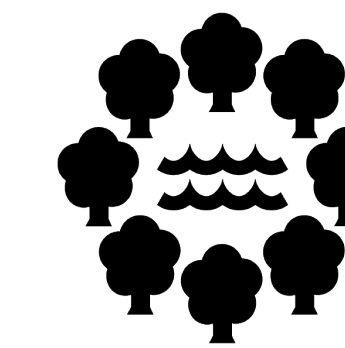

New walking paths loop around the existing and new park features that host a variety of outdoor yard games to create new opportunities for park users.
