

Elmer Says...

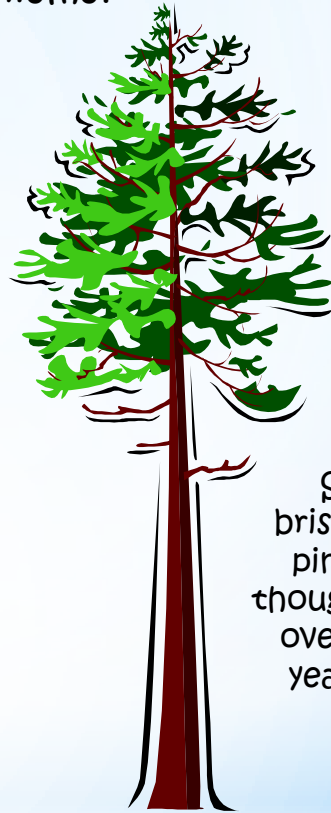

Trees are the largest and oldest living organisms on Earth!

An organism is any living thing. Animals, plants, trees, and human beings are all organisms!

Giant sequoia trees can weigh over 2000 tons (that's 4 million pounds)!

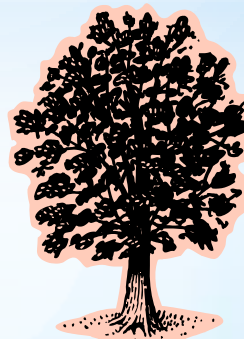

Many giant sequoia trees can be up to 2,500 years old!

Some bristlecone pines are thought to be over 5,000 years old!

Some coastal redwoods are over 360 feet tall! That's as tall as a football field is long!

Some oak trees can live to be over 500 years old!

We help trees.
