Cedar-Riverside Recreation Centers Predesign Study

The Minneapolis Park and Recreation Board (MPRB) is exploring a new facility intended for the delivery of programs and services in the Cedar-Riverside neighborhood. A renovation or nearby relocation of the Brian Coyle Community Center is also being explored as part of this project.

Project Scope
This project will explore the potential for building a new recreation center in the Interstate 94/Riverside Corridor, integrated into a larger development on the east end of the Augsburg University campus to meet the growing needs of the community. A new facility in the I-94/Riverside Corridor would supplement Brian Coyle Community Center programming that already serves this community. A renovation or nearby relocation of the Brian Coyle Community Center is also being explored as part of this project.

Funding Sources
The predesign phase, which will look at both the new facility and the Brian Coyle Community Center, is being funded by $330,000 of MPRB state bond funds.

Project Schedule
There is no specific timetable for construction or guarantee that the project will move forward as only predesign phase is currently funded. If state and/or private funds can be secured in 2019-2020, the earliest a new facility could be built is 2021.

Public Input
MPRB is committed to continuing a dialogue with the community throughout the overall project timeline. Throughout 2019, additional outreach in the form of open houses, focus groups and pop-up events will be scheduled to test key project decisions during the predesign phase of the project. MPRB will convene a formal Community Advisory Committee (CAC) to provide a recommendation to the MPRB Board on key project decisions. If you are interested in serving on the CAC, sign up for email updates at the website below.
