In 2019, the Minneapolis Park and Recreation Board will be replacing the playgrounds at Cleveland Park, Lovell Square Park and Farview Park. We are currently requesting feedback from the community on concept designs for each park. We will be adjusting and refining these designs based on feedback received during this public review and comment period through March 2019. The project designs will be finalized in the spring with construction completed in the fall of 2019.

In 2020, the Minneapolis Park and Recreation Board will be implementing a new bicycle pump and skills track at Perkins Hill Park. We are currently planning for community engagement and the design process to take place in the spring of 2019. Please see the websites below for more information:
