The 100-year floodplain has a predicted 1% chance of a flood event in any given year. Based on changing climate patterns, storm events will continue to be more intense in nature. This will result in a different floodplain pattern throughout the corridor. The projected floodplain depicts a model of a future 100-year floodplain in approximately 30 years.

* The 100-year floodplain has a predicted 1% chance of a flood event in any given year.
