Folwell Park Improvements

Addendum #2 – 12.08.22

Questions Received:

1. Do you anticipate that the majority of available budget will be used to design and implement the all-wheel park portion of the project?

Response: Because the all-wheel-park assumes a paved surface and that cost could be considerable, we could expect that a majority of the funds would go towards implementing this feature. However, we would also to explore if other park site improvement could be included with this project funding as part of the design process. One assumption is that adding additional basketball courts or doing the previously identified and designed field improvements should be a secondary focus.

2. Is it anticipated that drainage and/or stormwater management features will be a part of the next phase of park improvements?

Response: We would expect stormwater management features be a part of this phase of work for the all-wheel park. The project would need to comply with requirements of local, state, and regional erosion and sediment control authorities.
